## DESCRIPTION OF POPULATION ESTIMATES FOR LATEST YEAR GIVEN IN THIS QUESTIONNAIRE

In order that the description of national population estimates on file in the Statistics Division of the United Nations is accurate and complete, it is desirable to provide for confirmation or revision of the method of their construction. The questions below relate to coverage of data, and method of estimation. It is required that a check mark (X) be made in the box following the words which best describe the estimates in terms of these questions.

## 1 COVERAGE OF DATA

In conformity with definition given on page 2, estimates should relate to de facto population. In order to clarify the exact composition of the population, please indicate in the following check box the exact disposition of each group listed, using "IN" for included; "EX" for excluded. Specify years to which description refers.

Population Group	Estimated total population for year 20		
	In	Out	Not apl.
(a) Nomads	IN		
(b) Persons living in remote areas	IN		
(c) Military, naval and diplomatic personnel and their families		OUT	
located outside the country			
(d) Merchant seamen and fishermen resident in the country but at		OUT	
sea at the time of the census (including those who have no			
place of residence other than their quarters aboard ship)			
(e) Civilian residents temporarily in another country as seasonal		OUT	
workers			
(f) Civilian residents who cross a frontier daily to work in	IN		
another country			
(g) Civilian residents other than those in (c), (e), and (f)		OUT	
working in another country			
(h) Civilian residents other than those in (c)-(g), temporarily		OUT	
absent from the country			
(i) Foreign military, naval and diplomatic personnel and their	IN		
families located in the country			
(j) Civilian aliens temporarily in the country as seasonal	IN		
workers			
(k) Civilian aliens who cross a frontier daily to work in	IN		
another country			
(1) Civilian aliens other than those in (i), (j), and (k)			
working in another country			
(m) Civilian aliens other than those in (i)-(l), temporarily			
in country		I	
(n) Transients on ships in harbour at the time of the census	IN		

## 2. METHOD OF ESTIMATION

a)

) Total population
Estimates of total population for a country as a whole may be constructed by a variety of means.
Please indicate by a check mark [X] the method used in constructing the latest population estimate
Apr-02
If there are publications readily available with the description of methods used, please include thme
in reply to this questionnaire.
In rep-1 to this questionmarie.
Base Data
Dase Data
1- Continuous population register [ ]
2- *****
i)x
ii) population adjusted to take account of % underenumeration
11, population adjusted to take account of and elementation
3- Sample survey taken (date) [ ]
3- Sample Survey Caken (date)[1
A Postial common taken on montial confederation (data)
4- Partial census taken or partial registration (date) _
(Please describe)
5- Non-censal count of (date)[]
(describe method)
6- Conjectual estimate derived by means other than counting []
(describe method)
Method of time adjustment
1- Base data secured annually by population register [ ]
2- Applying statistics of births and deaths (natural increase), and migration
i) Registered vital statistics [ ]
ii) Vital statistics adjusted for incompleteness [ ]
11, Treat Scattscaes adjusted for incompleteness [ ]
3- Applying statistics of births and deaths (natural increase), but no account taken of migration
i) Registered vital statistics [ ]
ii) Vital statistics adjusted for incompleteness [ ]

4- Extrapolating mathematically from censuses taken and Please give :		
5- Applying an assumed rate of increase, not der	rived by mathema	tical extrapolation or interpolation but based
i) Assumption with respect to mortality, ferti	lity, migration [	1
ii) Assumption with respect to mortality, ferti	lity, but no acco	ount taken of migration [ ]
<pre>iii) Other assumed rate [ ]    If (i), (ii) or (iii) is checked, please give</pre>	e rate used, and	describe how obtained:
6- No time adjustment (base figure held constant [ ]	1	
7- Other (explain)		
) Population by age and sex Estimates of population according to age and sex ar as are the total estimates. However, certain addit: estimated from census enumerations or from sample so made in the basic age distribution used to construct	ional factors may urveys. Please in	affect age distributions dicate below the adjustment(s)
Adjustments in base

2- Surveys, other than a census		
	[ ]	[ ]
4- Observed rate of growth, assumed to continue	[ ]	[ ]

£An urban/rural breakdown is not provided in our population estimates

In order to bring up to date the bibliographical information you kindly supplied with last year's questionnaire, please list below publication which have become avaliable since that time or are to be issued in the near future which contain results of your latest population census or survey, and current statistics on population estimates, vital statistics and international migration.

This information is being requested for the purpose of compiling and maintaining a current bibliography of demographic statistics. The citations should, therefore, be in a form suitable for reference purposes, that is, the title, issuing agency or author, place, date of publication and number of pages should be given.

Example: Demographic Yearbook, 1999, United Nations, New York, 2001, 609 pp.

Population and Migration Estimates, April 2002. Central Statistics Office, 4 September 2002. 8 pages
(Note: the population estimates for years 1997 to 2002 are currently being revised in the light of the detailed Census of Population results)

Census 2002 Preliminary Report. Central Statistics Office, July 2002. 84 pages
Census 2002 Principal Demographic Results. Central Stastics Office, June 2003. 102 pages
Census 2002 Volume 1 Population classsified by Area. Central Statistics Office. July 2003. 173 pages
Census 2002 Volume 2 Ages and Marital Status. Central Statistics Office. July 2003. 146 pages
Census 2002 Volume 3 Household Composition and Family Units. Central Statistics Office. August 2003. 133 pages

In order that the description of national population series on file					
in the Statistical Division of the United Nations maybe as up to date as possible, it is desirable to provide for confirmation or revision					
of the method of their construction. The questions below relate to					
coverage of data and method of estimation. It is requested that a "X" be					
made in the field following the words which best describe the estimates in terms of these questions.					
	-				
1. COVERAGE OF DATA In conformity with definition given on the instructions,estimates should	1				
relate to DE FACTO population. In order to clarify the exact composition					
please indicate in the following check box the exact disposition of each					
group listed, using "IN" for included; "EX" for excluded. Specify years to which description refers.	-
