# DESCRIPTION OF POPULATION ESTIMATES FOR LATEST YEAR GIVEN IN THIS QUESTIONNAIRE

In order that the description of national population series on file in the Statistical Office of the United Nations may be as up to date and complete as possible. It is desirable to provide for confirmation or revision of the method of their constituction. The questions below relate to coverage of data; and sethod of estimation. It is requested that a check mark ( $\sqrt{\phantom{0}}$ ) be made in the box following the words which best describe the estimates in terms of these questions.

#### 1. COVERAGE OF DATA

In conformity with definition given on page 2, estimates should relate to de facto population. In order to clarify the exact composition of the population, please indicate in the following check box the exact disposition of each group listed, using "IN" for included; "EX" for excluded. Specify years to which description refers.

	for 19 <u>8</u> 3
Nomads	IN
Persons living in remote areas	IN
Military, naval and diplomatic personnel and their families located outside the country	IN
Merchant seamen and fishermen resident in the country but at sea at the time of the census (including those who have no place of residence other than their quarters aboard ship)	IN
Civilian residents temporarily in another country as seasonal workers	IN
Civilian residents who cross a frontier daily to work in another country	IN
Civilian residents other than those in (c), (e) and (f) working in another country	IN
Civilian residents other than those in (c)-(g) temporarily absent from the country	IN
Foreign military, naval and diplomatic personnel and their families located in the country	EX
Civilian aliens temporarily in the country as seasonal workers	EX
Civilian aliens who cross a frontier daily to work in the country	EΧ
Civilian aliens other than those in (i), (j) and (k) working in the country	IN
Civilian aliens other than those in (i)-(1) temporarily in the country	EX
ransients on ships in harbour at the time of the census	EX
	Persons living in remote areas  Military, naval and diplomatic personnel and their families located outside the country  Merchant seamen and fishermen resident in the country but at sea at the time of the census (including those who have no place of residence other than their quarters aboard ship)  Civilian residents temporarily in another country as seasonal workers  Civilian residents who cross a frontier daily to work in another country  Civilian residents other than those in (c), (e) and (f) working in another country  Civilian residents other than those in (c)-(g) temporarily absent from the country  Civilian residents other than those in (c)-(g) temporarily absent from the country  Civilian aliens temporarily in the country as seasonal workers  Civilian aliens who cross a frontier daily to work in the country  Civilian aliens other than those in (i), (j) and (k) working in the country  Civilian aliens other than those in (i)-(l) temporarily in the country

Country	SWEDE	Country	}
	SWEDE	N 1	)

#### 2. METHOD OF ESTEMATION

### a) Total population

Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark ( $\checkmark$ ) the method used in constructing the latest population estimate for (date)  $\frac{-1983-12-31}{-1983-12-31}$ , indicating the "base data" and the "method of time adjustment" in accordance with the components of the code described in the "Technical Notes" of each  $\frac{1}{2}$  Demographic Yearbook (pages 9-10 of the 1968 issue) and repeated below:

Continuous population register     Complete census taken (date)	$\mathcal{F}$
2) Complete census taken (date)	
	<i>C</i>
<ol> <li>population actually enume</li> <li>population adjusted to tal</li> </ol>	rated
3) Sample survey taken (date)	
4) Partial census taken or partia (Please describe)	l registration (date)
5) Won-censal count of (date)	[7] (Please describe cour
d of time adjustment	
OI OF CALLERY	1/
l) Base data secured annually by p	opulation register / /
· · ·	nd deaths (natural increase), and migration cs
Applying statistics of births a     i) Registered vital statisti     ii) Vital statistics adjusted	nd deaths (natural increase), and migration cs
<ul> <li>i) Registered vital statisti</li> <li>ii) Vital statistics adjusted</li> <li>i) Applying statistics of births a</li> </ul>	nd deaths (natural increase), and migration cs for incompleteness nd deaths (natural increase), but no account
2) Applying statistics of births a i) Registered vital statisti ii) Vital statistics adjusted ) Applying statistics of births a taken of migration.	for incompleteness

#### Statistical Office of the United Nations Questionnaire on Population Estimates

5) Applying an assumed rate of increase, not derived by mathematical extrapolation or interpolation, but based on:
i) Assumptions with respect to mortality, fertility, and migration $\Box$
<ol> <li>Assumptions with respect to mortality and fertility, but no account taken of migration</li> </ol>
111) Other assumed rate
If (1), (11) or (111) is checked, please give rate used, and describe how obtained:
6) No time adjustment (base figure held constant) // 7) Other (explain)
b) Population by age and sex
Estimates of population according to age and sex are assumed to be constructed
on the same base data as are the total estimates. However, certain additional
factors may be involved in the case of those age distributions estimated from
census enumerations or from sample surveys. Please indicate below the adjustment(s)
made in the basic age distribution used to construct estimates shown in Tables 2
and 4.
Adjustments in base
None - based on population actually enumerated at various ages or estimated from survey results
2) Enumerated population or population estimated from survey results adjusted to take account of underenumeration at various ages
3) Base age distribution "smoothed", i.e., adjusted to remove effects of digit preference in age reporting
Method of time adjustment
Distribution of estimated population according to age and sex may also be
made by same methods as used to obtain the projection of the total figure,
or it may be derived by distributing the estimate according to the percentage
of population in each age-sex group at time of census. Please indicate below
the method used in constructing the age-sex distribution of the latest estimate
shown in Table 2.
1) Applying actual or assumed natural increase and migration
2) Applying actual or assumed natural increase alone
3) Distributing the total estimate according to percentage of population in each age-sex group at time of census or of sample survey
4) By other means (describe)

## Disposition of unknown age

If frequency in unknown age category of Tables 2 and 4 is zero, please indicate below whether; in the preparation of the estimates:

- An age has been assigned to persons for whom age did not appear in the census or sample survey
- Frequency in unknown age category has been distributed proportionately among known ages
- 5) The frequency of unknown age appearing in the census or survey was zero
- c) Urban and rural population, and the population of cities

Post-censal estimates of the urban and rural population, or the population of individual cities, can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of total population, estimates of urban, or city population may be determined by an extrapolation of the percentage of urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban, or city, population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or of city population.

		Urban population	City population
1)	Population registers	$\Box$	
2)	Surveys, other than a census		$\Box$
3)	Extrapolation of percentage	$\Box$	
4)	Observed rate of growth, assumed to continue		$\Box$
5)	By other means (describe)		

# Bibliography of Demographic Statistics

In order to bring up to date the bibliographical information you kindly supplied with last year's questionnaire, please list below publications which have become available since that time or are to be issued in the near future which contain results of your latest population census or survey, and current statistics on population estimates, vital statistics and international migration.

This information is being requested for the purpose of compiling and maintaining a current bibliography of demographic statistics. The citations should, therefore, be in a form suitable for reference purposes, that is, the <u>title</u>, issuing agency or <u>author</u>, <u>place</u>, <u>date</u> of publication and number of pages should be given.

be given. Example: Demographic Yearbook, 1967, United Nations, New York, 1968, 778 pp. POPULATION LEC 31, 1983 (SOS) PART 1-2. COMMUNES STATISTICS SWEDEN, STOCKHOLM 1984. LAND PARISHES 1983 (808) POPULATION DEC 31. PART 3. DISTRIBUTION BY SEX, NGE, MARITAL STATUS AND CITIZENSHIP BY COMMUNE ETC. STATISTICS SWEDEN, STOCKHOLM 1984 POPULATION CHANGES 1983 (SOS) PART 1. PREISHES, COMMUNGS ETC. STATISTICS SWEDEN. STOCKHOLM 1984 POPULATION CHANGES 1983 (SOS) PART 2 MIGRATION BETWEEN COMMUNES ETC.
