

2. METHOD OF ESTIMATION

a) Total population

Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark (X) the method used in constructing the latest population estimate for (date) _____, indicating the "base data" and the "method of time adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below:

Base Data

- 1) Continuous population register
- 2) Complete census taken (date) 1 November 1990
i) population actually enumerated
ii) population adjusted to take account of _____% underenumeration
- 3) Sample survey taken (date) _____
- 4) Partial census taken or partial registration (date) _____
(Please describe) _____

- 5) Non-censal count of (date) _____
(describe method) _____

- 6) Conjectural estimate derived by means other than counting
(describe method) _____

METHOD OF TIME ADJUSTMENT

- 1) Base data secured annually by population register
- 2) Applying statistics of births and deaths (natural increase), and migration
i) Registered vital statistics
ii) Vital statistics adjusted for incompleteness
- 3) Applying statistics of births and deaths (natural increase), but no account taken of migration
i) Registered vital statistics
ii) Vital statistics adjusted for incompleteness
- 4) Extrapolating mathematically from censuses taken (dates) _____, _____,
and _____. Please give formula: _____

Disposition of unknown age

If frequency in unknown age category of tables 2 and 4 is zero, please indicate below whether; in the preparation of the estimates:

- 1) An age has been assigned to persons for whom age did not appear in the census or sample survey
- 2) Frequency in unknown age category has been distributed proportionately among known ages
- 3) The frequency of unknown age appearing the census or survey was zero

c) Urban and rural population, and the population of cities

Post-censal estimates of the urban and rural population, or the population of individual cities, can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of total population, estimates of urban, or city population may be determined by an extrapolation of the percentage of urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city, population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or of city population.

	<u>Urban population</u>	<u>City population</u>
1) Population registers.....	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2) Surveys, other than a census.....	<input type="checkbox"/>	<input type="checkbox"/>
3) Extrapolation of percentage.....	<input type="checkbox"/>	<input type="checkbox"/>
4) Observed rate of growth, assumed to continue..	<input type="checkbox"/>	<input type="checkbox"/>
5) By other means(describe)_____		

Bibliography of Demographic Statistics

In order to bring up to date the bibliographical information you kindly supplied with last year's questionnaire, please list below publication which have become available since that time or are to be issued in the near future which contain results of your latest population census or survey, and current statistics on population estimates, vital statistics and international migration.

This information is being requested for the purpose of compiling and maintaining a current bibliography of demographic statistics. The citations should, therefore, be in a form suitable for reference purposes, that is, the title, issuing agency or author, place, date of publication and number of pages should be given.

Example: Demographic Yearbook, 1967, United Nations, New York, 1968, 778 pp.

Befolkningsstatistik 1991 del 1-4 Statistics Sweden

Folk- och bostadsräkningen 1990 del 1-7 Statistics Sweden
