## NOTE

Symbols of United Nations documents are composed of capital letters combined with figures.

The designations used in this publication have been provided by the competent authorities. Those designations and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Where the designation "country or area" appears in the headings of tables, it covers countries, territories, cities or areas.

Provisional .....	*

Inquiries and comments concerning the scope, content and organization of the *Compendium of Human Settlements Statistics 2001* are welcome. They should be addressed to the Director, Statistics Division, United Nations, New York, 10017 or to the Chief, Urban Observatory, United Nations Centre for Human Settlements (Habitat), P.O. Box 30030, Nairobi, Kenya.

## INTRODUCTION

This sixth issue of the *Compendium of Human Settlements Statistics* has been prepared as a joint publication by the Statistics Division, Department of Economic and Social Affairs (DESA) of the United Nations Secretariat and the United Nations Centre for Human Settlements (Habitat), pursuant to the conclusion of the twenty-eighth session of the Statistical Commission.<sup>1/</sup>

The objective of the *Compendium* is to make readily available in one publication a comprehensive set of data on living conditions in human settlements and estimates and projections relating to urbanization and households. In addition, the *Compendium* serves as a statistical foundation for the *Global Report on Human Settlements* and its Statistical Annex which the General Assembly in its resolution 34/114 of 14 December 1979, requested the United Nations Centre for Human Settlements (Habitat) to prepare on a regular basis. This resolution specified that *The Global Report* should contain a complete review of human settlements conditions, including an analysis of their development and continuing evolution.

This sixth issue of the *Compendium* is timed to coincide with the Special Session of the United Nations General Assembly for an Overall Review and Appraisal of the Implementation of the Habitat Agenda (Istanbul +5) which is being held in New York from 6-8 June 2001.

The selection and organization of the contents of the *Compendium* were undertaken by the United Nations Statistics Division, in close cooperation with the Tools and Statistics Programme of UNCHS (Habitat). The *Compendium* consists of thirteen tables. Eight of the tables are based on a special questionnaire prepared by the United Nations Statistics Division and Habitat and present data on population and housing in human settlements. In addition, the publication presents four tables based on estimates and projections of urban population and large urban agglomerations prepared by the Population Division, Department for Economic and Social Affairs, of the United Nations Secretariat.<sup>2/</sup> The final table in the publication provides projections on the number of households and annual household growth rates, prepared by Habitat.

## TECHNICAL NOTES

### A. GENERAL NOTES

#### 1. Sources and time periods of the statistics

The *Compendium* brings together human settlements statistics for 243 countries or areas and 315 cities. The sources of data presented in this publication are as follows:

- Human Settlements Statistics Questionnaire 1999 was prepared by the United Nations Statistics Division in close cooperation with the United Nations Centre for Human Settlements (Habitat) and was sent to over 220 national statistical offices in 1999. The questionnaire requested human settlements statistics at national, urban/rural and city levels and was used in the preparation of tables 1 through 8 of this *Compendium*. National figures in these tables are presented as received by the United Nations and when needed, additional information is provided in notes following each table.

- The United Nations *Demographic Yearbook* and Demographic and accompanying databases were also used extensively to supplement population data not covered by the Human Settlements Statistics Questionnaire 1999. The *United Nations Demographic Yearbook* is a comprehensive collection of international demographic statistics, prepared by the United Nations Statistics Division, DESA through the cooperation of national statistical services.

- *World Urbanization Prospects - The 1999 Revision, Data Tables and Highlights*, prepared by the United Nations Population Division, DESA presents estimates and projections of urban and rural populations and of urban agglomerations. The publication also contains revised estimates and projections for all urban agglomerations that had at least 750,000 inhabitants in 1999. This publication was used as the source for tables 9, 10, 11 and 12 of the present *Compendium*.

- *Habitat Household Projections Project* by the Tools and Statistics Programme of UNCHS (Habitat), provided projections of the number of households. These data are presented in table 13.

The reference year is, as a rule, presented to indicate the period covered by data displayed. When the data are from a source other than a census or a survey, i.e. administrative records, several consecutive years may be shown to permit comparison over time. In general, the reference year of data has been entered after the name of the country. In cases where the reference years for data at country level and city levels differ, the appropriate year has been entered after the name of the city.

The main benchmark data sources for most population and housing statistics are national population and housing censuses. The internationally recommended concepts and definitions for carrying out population and housing censuses are published in *the Principles and Recommendations for Population and Housing censuses*<sup>3/</sup>, the *Supplementary Principles and Recommendations for Population and Housing Censuses*<sup>4/</sup>, and *Principles and Recommendations for Population and Housing Censuses, Revision 1*<sup>5/</sup>.

#### 2. Geographical classification and nomenclature

In most cases the statistics give national or area totals with an urban/rural breakdown. In addition, for each country or area, data for the capital city and three (or fewer) largest cities are also shown if provided. The nomenclature and arrangement of countries or areas and cities are explained in subsection (a) below. The

---

<sup>3/</sup> United Nations publication, Sales No. E.80.XVII.8.

<sup>4/</sup> United Nations publication, Sales No. E.90.XVII.9.

<sup>5/</sup> United Nations publication, Sales No. E.98.XVII.8

selection and definition of cities or urban agglomeration are explained in subsection (b) below. The national definitions of urban/rural are given in subsection (c) below. In addition, national definitions of households are provided in subsection (d).

*(a) Nomenclature and arrangement of countries or areas and cities*

Given space limitations, the country or area names listed in the tables and graphs are the commonly employed short titles in use in the United Nations as at 31 March 1999<sup>6/</sup>; the full titles are used only when a short form is not available.

In so far as possible, all data, including time series data, relate to the territory within 1998 boundaries. Exceptions to these are footnoted in individual tables.

Data relating to the People's Republic of China generally include those for Taiwan Province in the field of statistics relating to population, surface area, natural resources, etc. In other fields of statistics, they do not include Taiwan Province unless otherwise stated.

Data presented for the Holy See refer to Vatican City.

Countries or areas are listed in English alphabetical order within the following continents: Africa, North America, South America, Asia, Europe and Oceania.

The designations employed and the presentation of the material in this publication were adopted solely for the purpose of providing a convenient geographical basis for the accompanying statistical series. The same qualification applies to all notes and explanations concerning the geographical units for which data are presented.

Name of cities are presented in the original language of the country or area in which the cities are located. In cases where the original names are not in Roman alphabet, they have been Romanized. Cities are listed in English alphabetical order. The names of capital cities are printed in capital letters. The designation of any specific city as a capital city is done solely on the basis of the designation as reported by country or area.

Totals and sub-totals shown in the tables are not always equal to the sums of their component parts due to rounding.

Explanatory notes concerning selected figures are indicated by footnote indicators shown against the name of the relevant countries or areas and are indicated by the numbers. The corresponding texts will be found at the end of each table.

*(b) Selection and definition of cities*

Since the main purpose of this publication is to provide basic statistics on human settlements, data at the level of cities or urban agglomerations were requested from countries or areas for most tables of the *Compendium*. The criteria used to determine the number of cities to be covered were developed taking into account data availability within national statistical services and size of countries or areas and cities. In the majority of countries or areas, data for the capital city and three other largest cities were requested.

---

<sup>6/</sup> "Names of Countries and Adjectives of Nationality" (United Nations document ST/CS/SER.F/317 and Corr.1-2).

The number of cities covered decreased with the population of the specific country or area and with the non-existence of cities with 100,000 or more inhabitants. Therefore, for some countries and areas data for capital city and two other were collected, and in some cases only data for the capital city.

The city, for the purpose of data collection and presentation in this publication, is defined as administrative city. An administrative city is defined according to legal/political boundaries established in each country for each city. If data for urban agglomeration were received, they were displayed and footnoted. An urban agglomeration comprises the city or town proper and also suburban fringe or thickly settled territory lying outside, but adjacent to, its boundaries. Where data refer to some other administrative unit (e.g. provinces, metropolitan area, etc.) an explanatory footnote was provided.

*(c) National definitions of urban-rural*

The traditional distinction between urban and rural areas within a country is based on the assumption that urban areas provide a different way of life and usually a higher level of living than is found in rural areas. International comparability of urban-rural distributions is seriously impaired by the wide variation among national definitions of the concept of 'urban', as can be seen from the definitions shown below.

A detailed overview of national definitions is available in the *United Nations Demographic Yearbook 1998*<sup>7/</sup>. For the purposes of this *Compendium*, the Human Settlements Statistics Questionnaire 1999 requested national definitions of urban and rural and they are presented below:

*Bahamas*

For the data provided for this *Compendium* the island of Nassau/New province and Grand Bahamas are treated as urban, while the rest of the Bahamas islands are treated as Rural.

*Belarus*

Urban localities are human settlements that in accordance with legislation have the status of towns.

*Canada*

Urban areas include all greater metropolitan areas (even though they contain some rural areas) and most smaller metropolitan areas. Urban areas have a minimum population concentration of 1,000 people and a population density of at least 400 per square kilometer based on the previous census population counts.

*Cyprus*

Urban regions include the municipality area, the suburban area and the greater urban area. The boundaries of the urban regions are those defined by the Local Towns Plans of the Department of Town Planning and Housing.

*Dominican Republic*

Urban zones refer to areas in municipalities.

*Estonia*

Urban areas include towns and townships, while rural areas include villages.

*Finland*

Urban municipalities are those municipalities in which at least 90 per cent of the population live in urban

---

<sup>7/</sup> United Nations publication No. E/F.00.XIII.1.

settlements or in which the population of the largest urban settlement is at least 15,000 inhabitants.

Semi-urban municipalities are those municipalities in which at least 60 per cent but less than 90 per cent of the population live in urban settlements and in which the population of the largest urban settlement is at least 4,000 but less than 15,000 inhabitants.

Rural Municipalities are those municipalities in which less than 60 per cent of the population live in urban settlements and in which the population of the largest urban settlement is less than 15,000 inhabitants as well as those municipalities in which at least 60 per cent but less than 90 per cent of the population lives in urban settlements and in which the population of the largest urban settlement is less than 4,000 inhabitants.

#### *Gambia*

The Central Statistics Department in collaboration with the Department for Physical Planning and other ministries and departments concerned identified settlements as urban if they satisfied most of the following criteria:

- Commercial importance, Institutional importance
- Majority of the population should be non-agricultural
- Population should be 5000 and above
- Density should be high
- Some degree of infrastructure facilities should be available

#### *Ireland*

##### Aggregate Town (Urban)

The population in the aggregate town area is defined as those persons living in population clusters of 1,500 or more inhabitants. The population residing in all areas outside clusters of 1,500 or more inhabitants is classified as belonging to the Aggregate Rural area. The Aggregate Rural area is a statistical concept.

#### *Isle of Man*

##### Urban/Rural

For administrative reasons, the Isle of Man is divided into 24 regions. Historically these are classified as Towns, Villages and Parishes. For the purpose of this *Compendium*, towns and villages have been classified as urban and parishes as rural.

#### *Japan*

Japan is administratively divided into forty-seven prefectures of which 43 carry the suffix *ken* and the remaining four are known as *to*, *do* or *fu*. Each prefecture is further divided into *shi* (cities) and *gun* or *shicho* (rural counties).

*Gun* and *shicho* are subdivided into *machi* or *cho* (towns) and *mura* or *son* (villages). The 13 major cities, i.e. Tokyo, Yokohama, Osaka, Nagoya, Sapporo, Kyoto, Kobe, Fukuoka, Kawasaki, Kitakyushu, Hiroshima, Sendai and Chiba are subdivided into *ku* (wards).

For urban and rural areas, the data for Japan include all *shi* and all *gun* (that is, *machi* and *mura*). However, after the Town and Village Merger Acceleration Law was established in 1953, there was considerable enlargement of *shi* areas through absorption of neighboring *machi* and *mura* as well as an increase in the number of *shi* due to the new incorporation of former *machi* or *mura* into *shi*.

As a consequence, many *shi* came to encompass sparsely inhabited agricultural areas under their jurisdiction and no longer represent pure urban areas.

Under these circumstances, the concept of Densely Inhabited District was developed by the Statistics Bureau and has been applied since the 1960 Population Census.

A Densely Inhabited District, which is often referred to as DID is defined as an area within a *shi, ku, machi* or *mura* that is composed of a group of contiguous Basic Unit Blocks each of which has a population density of about 4,000 inhabitants or more per square kilometer and whose total population exceeds 5,000 as of 1 October 1995.

*Kazakhstan*

Urban settlements are all cities and towns of republican, regional or district (rayon) subordination and also industrial communities with a population of more than 3,000 persons and settlements located in the areas of medical importance with a population of more than 2,000. All other settlements are rural irrespective of their administrative subordination.

*Korea, Democratic Republic of*

In Korea, areas are largely classified into 2 categories, SHI and GUN according to the level of administration. SHI, which is equivalent to a City, is considered as an urban area. GUN which is composed of UP (equivalent to town) and MYON (equivalent to the countryside) is considered a rural area.

*Latvia*

Urban population refers to those persons who live in cities and towns, that is populated areas with developed industry, social infrastructure and communal economy, with the resident population not less than 2000. The cabinet of ministers of Latvia approved the list of cities and towns. In a number of historically developed cities the population may be less than 2000. The rest are considered rural areas.

*Libya*

Urban refers to every district of 5000 or more inhabitants.

*Malaysia*

Urban Area includes gazetted areas with their adjoining built-up areas which have a combined population of 10,000 or more at the time of the 1991 census; built-up areas are areas contiguous to gazetted areas and with at least 60 per cent of that population (aged 10 years or more) engaged in non-agricultural activities and at least 30 per cent of their housing units with modern facilities.

*Malta*

Because of the small area of the Maltese islands and the relative homogeneity between what are locally termed cities, towns and villages, no distinction is made in Maltese statistics between urban and rural settlements.

*Mexico*

Urban refers to localities with the population over 2,500.

*Netherlands*

Urban and rural areas are derived from the concept 'urbanization category' which is determined on the basis of the numerical values for address density of the individual municipalities. Five groups or classes are distinguished. Whereby the class boundaries are selected in such a way that all classes are made up of roughly the same number of inhabitants.

The municipalities are distinguished according to the following five categories:

- Very strongly urbanized, with an address density of 2,500 addresses or more per km<sup>2</sup>;
- Strongly urbanized, with an address density of 1,500 to 2,500 addresses per km<sup>2</sup>;
- Moderately urbanized, with an address density of 1,000 to 1,500 addresses per km<sup>2</sup>;
- Weakly urbanized, with an address density of 500 to 1,000 addresses per km<sup>2</sup>;

- Not urbanized, with an address density of less than 500 addresses per km<sup>2</sup>.

Urban areas are defined as very strongly urbanized, strongly urbanized or moderately urbanized areas (thus an aggregate of the first three values).

Rural areas are defined as weakly urbanized areas (thus an aggregate of the last two values of the variable).

*Niger*

Urban areas are considered those within towns and cities, i.e. with increased population density and availability of infrastructure and services.

*Norway*

In order for an agglomeration of houses to be considered as an urban settlement, it should have at least 200 residents and the distance between the houses should normally not exceed 50 meters. Deviations are allowed for areas that cannot/are not to be occupied, for example parks, sports facilities, industrial areas or natural barriers such as rivers or arable areas. Also included are agglomerations that naturally belong to the urban settlement with up to a distance of 400 meters from the center of the urban settlement.

*Poland*

Guines is the smallest unit of administrative division of the country. In 1998 there were 2,489 guines that is 308 - urban guines, 567 - urban-rural guines and 1604 - rural guines.

*Seychelles*

The only city or urban area in Seychelles is the capital city Victoria, which is an administrative area. Data presented here refer to Greater Victoria which consists of Victoria city, all the central districts and Victoria suburbs. All other area of the Seychelles, are for the purpose of this publication defined as rural.

*Slovakia*

Urban area refers to 138 cities with population over 5000.

*Spain*

Urban refers to human settlements with more than 2,001 inhabitants.

*Sweden*

Locality is a group of buildings normally not more than 200 meters apart from each other and having at least 200 inhabitants. In Sweden localities are defined as urban and all areas outside the localities as rural.

*Thailand*

Urban refers to Municipal areas.

*Turkey*

Urban refers to settlements with a population of 20001 and over.

*United Kingdom*

Urban refers to a built up area with a population of more than approximately one thousand (1,000) based on population as at 1991.

*United States of America*

Census Bureau-defined Urbanized Areas (UAs) are defined to represent human settlements with over

50,000 people. A UA is defined by the Census Bureau as an "area consisting of a central place(s) and adjacent urban fringe that together have a minimum residential population of at least 50,000 people and generally an overall population density of at least 1,000 people per square mile of land area".

*(d) National definitions of household*

In addition to the definitions of urban areas, the *Human Settlements Statistics Questionnaire* collected national definitions of a household. These are presented below:

*Australia*

A household is defined as a group of two or more related or unrelated people who usually reside in the same dwelling, who regard themselves as a household, and who make common provision for food or other essentials for living; or a person living in a dwelling who makes provision for his/her food or other essentials for living, without combining with any other person. Under this definition, in a group house where occupants share the dwelling, each occupant who usually supplies his/her own food should be counted as a separate household.

*Bahamas*

A Household is synonymous with the dwelling unit in that it is defined as a person or group of persons occupying a dwelling unit.

*Canada*

Household is a person or group of persons occupying one dwelling unit. The number of households equals the number of occupied dwellings.

*Cyprus*

Household is either:

- (a) A one person household consisting of one person who lives alone in a separate housing unit who occupies as a lodger, a separate room(s) of housing unit but does not join with any other occupants of the housing unit to form part of a multi-person household.
- (b) A multi-person household which consists of a group of two or more persons who combine to occupy the whole or part of a housing unit and to provide themselves with food and possibly other essentials for living. The group may be composed of related / unrelated persons or of a combination of both including boarders and excluding lodgers.

*Dominican Republic*

A household is constituted by persons who may or may not be related and who live in the same house and have a common budget for meals. Households could be classified as follows:

- Single households - only the single person/head;
- Nuclear household - head of the family, the spouse with or without a single child;
- Extended Household - nuclear household which includes the parents or in-laws of the head of household or a secondary nuclear household family, that is a married child, son or daughter-in-law with or without children or grandchildren, with or without other relatives or a nuclear household with other relatives only or the head with a group of related persons not included in the categories mentioned before;
- Compound household - Constituted by a nuclear household with no other families;
- Institutional household - Made of people living in a collective living quarters.

*Estonia*

Household is a group of people living at the same address and sharing joint monetary resources and whose members consider themselves to be members of one household.

*Gambia*

A household consists of a person or group of people who live together in the same house or compound and share the same housekeeping arrangement. Members of the same household are not necessarily related by blood or marriage.

*China - Hong Kong SAR*

A household consists of a group of persons who live together and make common provision for essentials for living. These persons need not be related. If a person makes provision for essentials for living without sharing with other persons, he or she is also regarded as an individual household.

Households can be classified into two types:

1) Domestic Household: A domestic household usually consists of related family members. However unrelated persons such as friends or domestic servants living in the household may be included as members as well. The expenditure of the household is usually borne by one or more household members. Single persons who do not share provisions for essentials for living with other persons are also considered as domestic households. A group of related or unrelated persons who live in the same quarters and share the household expenditure on food and accommodation should also be treated as a domestic household.

2) Collective Household: A collective household usually consists of unrelated persons. The expenditure on food and accommodation of the households is usually borne by:

- Government / public charitable bodies, e.g. home for the aged, boys home, girls home and halfway house.
- Private / other organizations where residents there have to pay for their expenditure e.g. hospital and boarding school dormitory.
- Employers e.g. quarters for restaurant workers (excluding families living in married quarters).

*Ireland*

Private Household

- A Private Household comprises either one person living alone or a group of people (not necessarily related) living at the same address with common housekeeping arrangements- that is, sharing at least one meal a day or sharing a living room or sitting room. A permanent private household is a private household occupying a permanent dwelling such as a dwelling house, flat or bed-sitter. A temporary private household is a private household occupying a caravan, mobile home or other temporary dwelling and includes travelers and homeless persons living rough on census night.

Non-Private Household

- A Non-Private Household is a group of persons enumerated in a boarding house, guest house, barrack, hospital, nursing home, boarding school, religious institution, welfare institution, prison or ship etc. However, proprietors and managers of hotels, principals of boarding schools, persons in charge various other types of institutions and members of staff who, with their families, occupy separate living accommodation on the premises are classified as private households.

*Isle of Man*

Private Household

A private household comprises either one person living alone or a group of persons (who may or may not be related) living at the same address with common housekeeping expenditures.

*Jamaica*

A household may consist of one person who lives alone or several that jointly occupy the whole or part of a dwelling unit, have common arrangements for housekeeping; and generally share at least one meal. The

household may be composed of related persons only, unrelated persons or a combination of both.

#### *Japan*

Households are classified into "private households" and "institutional households". They are defined as follows:

*Private households* consist of the following three groups:

- A group of persons sharing living quarters and living expenses or a person who lives by himself/herself occupying a dwelling house. The live-in single employees who live with the household of their employer are included in the household of the employer regardless of the number of the live-in employees.
- A person residing together with the household as defined above but keeping a separate budget, or a person residing in a boardinghouse.
- Each person who lives in a dormitory for unmarried employees of the company, corporation, store, government, etc.

*Institutional households* include households below:

- Students in school dormitories;
- Inpatients of hospitals who had been hospitalized in a hospital for three months or more at the census date;
- Inmates of social institutions such as an homes for elderly;
- Persons in camps of self-defense Forces or crew of a ship of self-defense forces;
- Inmates of reformatory institutions residing in prisons or detentions house whose penalties had been fixed, or persons in a reformatory or a women's guidance home;
- Other person who had no usual living places or crews who had no usual living places on land.

Private households are, furthermore, classified according to the relationship to the household head into three broad categories: (a) relatives' households, i.e. multi-person households consisting of the head of household and his/her related members; (b) non-relatives' households, i.e. multi-person households without household members related to the head, and (c) one-person households.

#### *Kazakhstan*

Household is a small group of persons living together and combining (completely or partly) their income and property, and also consuming jointly certain types of goods and services, which are represented mainly by dwellings and food products.

#### *Korea, Democratic Republic of*

A household consists of a person who provides for his own food and essentials necessary for living or a group of two or more persons who provide for their own food and essentials necessary for living.

#### *Libyan Arab Jamahiriya*

Household is one or more persons living in one house and accommodating themselves, regardless of being of their relationship.

#### *Malaysia*

The concept of a household was based on arrangements made by persons, individually or in groups, for food and other essentials for living within the same living quarters. A household may be one of the following:

- A single person household, that is, one member who makes provision for his own food and other essentials for living without combining with any other person(s) or;
- A multi-person household, that is, a group consisting of two or more persons who live together and make provision for their food and other essentials for living. A multi-person household may consist of

related and/or unrelated members.

*Malta*

The Census of Population and Housing taken on 26 November 1995 distinguished between private and institutional households. The figures given here are for private one-person households or multi-person households.

*Netherlands*

The concept of a household was based on arrangements made by persons, individually or in groups, for food and other essentials for living within the same living quarters. A household may be one of the following:

- A single person household, that is, one member who makes provision for his or her own food and other essentials for living without combining with any other person(s) or;
- A multi-person household, that is, a group consisting of two or more persons who live together and make provision for their food and other essentials for living. A multi-person household may consist of related and/or unrelated members.

*Niger*

The household is defined as all the persons living in same house /dwelling and sharing meals.

*Poland*

A household is a group of persons living in a common housing accommodation and having a joint budget. Single persons living separately create one-person households.

*Puerto Rico*

A household includes all persons that occupy one unit of housing i.e. house, apartment, mobile house, a set of rooms or a single room which is occupied or ready to be occupied. A separate shelter is one where occupants live and eat separately from the main building that has a direct access from corridors. The occupants could be one family or a single person living alone or two or more persons living together or any group of people that have a parental relationship or not but share a common expenditure of the house.

*Saint Lucia*

A private household consists of one or more persons living together (i.e. sleeping most nights of the week) and sharing at least one daily meal. It is important to note that a member of a household need not be a relative of the main family. For example, a boarder or domestic servant who sleeps in most of the nights of the week is a member of the household. It is possible for a household to consist of just one person, or of more than one family, as long as they share living arrangements. A group of unrelated persons living together can also comprise a household.

*Seychelles*

A household is a group of persons who usually sleep in the same house and who eat together (or from the same food supply). A lodger or a maid who eats with the family or is fed by the family forms part of their household. If however they are responsible for buying and preparing their own food they become separate household even if they stay in the same house. This also applies to other members of the family who prepare and eat separately from the other members, even if they sleep in the same house.

*Singapore*

The definition of a household is the same as that of a dwelling: it refers to a private household with at least one core member who is a Singapore citizen or permanent resident.

*Slovakia*

Household is the smallest social collectivity of persons living in the same dwelling designed within the scope of housekeeping unit according to family or other relationship. It is based on family concept.

*Tonga*

In the Tonga Population Census 1996, a household was defined as "those persons who usually eat together and share the work of preparing the food and/or the cost of work of providing it".

**B. NOTE ON GRAPHICAL PRESENTATION**

The present issue of the Compendium includes graphical presentation of statistics at the beginning of tables 1 to 11. The criteria for selecting the country, area or city to be represented in a graph are: (a) the largest and the smallest number of units, for example population, human settlements and households; and (b) the most comprehensive information available. At least one country, area or city from each of the major regions of the world are included where possible. As in the tables, the order of presentation follows alphabetically within the major region (Africa, North America, South America, Asia, Europe and Oceania). All notes that apply to the specific table apply also to the graph that precedes it.

## 1. Number of human settlements by size: country or area, urban/rural, latest available year

### Technical notes

#### Definitions

The term *human settlement* largely corresponds to the *locality*, as defined in population and housing censuses. It refers to a distinct population cluster (also designated as inhabited place, populated centre and so forth) in which the inhabitants live in neighbouring sets of living quarters and that has a name or locally recognized status. It includes fishing hamlets, mining camps, ranches, farms, market towns, villages, towns, cities and many other population clusters that meet the criteria specified above. Deviations from this definition are found in footnotes at the end of this table.

#### Coverage

Data are presented for 67 countries or areas and for urban and rural human settlements. For national definitions of urban and rural, see section on General Notes.

**Small settlements (up to 10,000 population) as a percentage of all human settlements: selected countries**

# 1. Number of human settlements by size: country or area, urban/rural, latest available year

## NOTES

<sup>1</sup> Data refer to administrative cities and municipalities and not necessarily to human settlements.

<sup>2</sup> Data refer to all human settlements with population of 10,000 and over.

<sup>3</sup> Data refer only to cities, as defined by national legislation and to large settlements (over 20,000) not officially defined as cities (this refers to Pike, a satellite town of Dakar). Exact data on rural settlements are not available: the majority of villages and hamlets numbering 12,000 to 13,000 have less than 10,000 inhabitants.

<sup>4</sup> The total for the country differs from the sum of urban and rural areas due to the lack of urban/rural information for all settlements.

<sup>5</sup> Data refer to the Commonwealth of the Bahamas.

<sup>6</sup> Data on human settlements with the population under 5,000 comprise local authorities with 500-1,999 inhabitants only.

<sup>7</sup> Data are based on projections of settlements at provincial level.

<sup>8</sup> Difference between the total and sum of individual categories is due to the inclusion of the cities of Tajrish and Raywhich with the city of Tehran.

<sup>9</sup> Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

<sup>10</sup> Data on urban areas are provisional.

<sup>11</sup> Data refer to administrative regions.

<sup>12</sup> Data on urban areas refer to municipal areas.

<sup>13</sup> Data on rural areas refer to non-municipal areas.

<sup>14</sup> Data on total number of rural settlements include 764 enumerated uninhabited settlements.

<sup>15</sup> In Estonia there are 13 towns and townships with population of under 2,000 that are considered urban settlements.

<sup>16</sup> Data on urban and rural settlements are based on delimitation effected during the population census 1990. Delimitation of the 1999 Census will be available by the end of 2000.

<sup>17</sup> Urban population refers to those persons who live in cities and towns, i.e. populated areas with developed industry, social infrastructure and communal economy, with the resident population not less than 2,000. The cabinet of ministers of Latvia approved the list of cities and towns. In a number of historically developed cities the population may be less than 2,000. All the rest is rural population.

<sup>18</sup> Because of the small area of the Maltese Islands and the relative homogeneity between what are locally termed cities, towns and villages, no distinction is made in Maltese statistics between urban and rural settlements.

<sup>19</sup> In order for an agglomeration of houses to be considered as an urban settlement, it should have at least 200 residents and the distance between houses should normally not exceed 50 meters. Deviations are allowed for areas that cannot/are not occupied, e.g. parks, sports facilities, industrial areas or natural barriers such as rivers or arable areas. Also included are agglomerations that naturally belong to the urban settlement with up to a distance of 400 meters from the centre of the urban settlement.

<sup>20</sup> Urban and rural settlements refer to urban cities and guinas (rural areas). Total number of human settlements (3,046) includes 308 urban guinas, 567 urban/rural guinas and 1604 rural guinas. Total number of human settlements ranging 1-4.999 refer to Warsaw which comprises 11 guinas which were counted as one.

<sup>21</sup> Locality: A group of buildings normally not more than 200 meters apart from each other and has to fulfill a minimum criterion of having at least 200 inhabitants. In Sweden localities are defined as urban and all areas outside the localities as rural.

## 2. Households by type of living quarters: country or area, urban/rural, cities, latest available year

### Technical notes

#### Definitions

##### *Households*

The concept of *household* is based on the arrangements made by persons, individually or in groups, for providing themselves with food or other essentials for living. A household may be either (a) a one-person household, that is, a person who makes provision for his or her own food or other essentials for living without combining with any other person to form a part of a multi-person household or (b) a multi-person household, that is, a group of two or more persons living together who make common provision for food or other essentials for living. The persons in the group may pool their incomes and may, to a greater or lesser extent, have a common budget; they may be related or unrelated persons or constitute a combination of persons both related and unrelated. This concept of household is known as the "housekeeping" concept. It does not assume that the number of *households* and *housing units* (see below) is equal. Although the concept of housing unit implies that it is a space occupied by one household, it may also be occupied by more than one household or by a part of a household (for example, two nuclear households that share one housing unit for economic reasons or one household in polygamous society routinely occupying two or more housing units).

Although the general concept of a household falls within the boundaries listed above, national definitions differ. For a detailed list, please see section on General Notes.

##### *Type of living quarters*

*Living quarters* are structurally separate and independent places of abode. They may (a) have been constructed, built, converted or arranged for human habitation, provided that they are not used wholly for other purposes and that, in the case of improvised housing units and collective living quarters, they are occupied at the time of the enumeration or (b) although not intended for habitation, actually be in use for such a purpose. *Living quarters* are either *housing units* or *collective living quarters*.

*Housing unit* is a separate and independent place of abode intended for habitation by a single household, or one not intended for habitation but occupied as living quarters by a household at the time of the enumeration. It may be an occupied or vacant dwelling, an occupied mobile or improvised housing unit or any other place occupied as living quarters by a household at the time of the census. This category includes housing of various levels of permanency and acceptability.

*Conventional dwelling* is a room or suite of rooms and its accessories in a permanent building or structurally separated part thereof which, by the way it has been built, rebuilt or converted, is intended for habitation by one household and is not, at the time of the enumeration, used wholly for other purposes. It should have a separate access to a street (direct or via a garden or grounds) or to a common space within the building (staircase, passage, gallery and so on). Examples of dwellings are houses, flats, suites of rooms, apartments. Therefore, the essential elements of a *conventional dwelling* are: (a) a room or suite of rooms, (b) located in a permanent building, (c) with separate access to a street or to a common space, (d) intended to be occupied by one household, equipped with the following facilities within dwelling: (e) kitchen or other space for cooking, (f) fixed bath or shower, (g) toilet, and (h) piped water.

*Basic dwelling* is a housing unit that has some but not all of the essential facilities of a conventional dwelling. It is a permanent structure or a part of a permanent structure, hence it may be a room or a suite of rooms in a permanent building but it is without some of the conventional dwelling facilities such as kitchen, fixed bath or shower, piped water or toilet. In a number of countries or areas, a certain proportion of the housing inventory comprises such housing units which possess some but not all the characteristics of conventional dwellings. Therefore, basic dwellings are more or less conventional from the point of view of permanency of structure but lack some of the housing facilities identified as essential (the four types being cooking facilities, bathing facilities, piped water and toilet).

*Temporary housing unit* refers to a structure that, by the way it has been built, is not expected to maintain its durability for as long a period of time as, but has some of the facilities of, a conventional dwelling. This category refers also to a traditional and typical type of housing unit that does not have all the characteristics of conventional or basic dwellings but is considered somewhat suitable from the point of view of climate and tradition. This is especially the case in many tropical and subtropical rural areas where housing units have been constructed or built with locally available raw materials such as bamboo, palm, straw or any similar materials. Such units often have mud walls, thatched roofs and so forth, and may be expected to last only for a limited time (from a few months to 10 years), although occasionally they may last for longer periods.

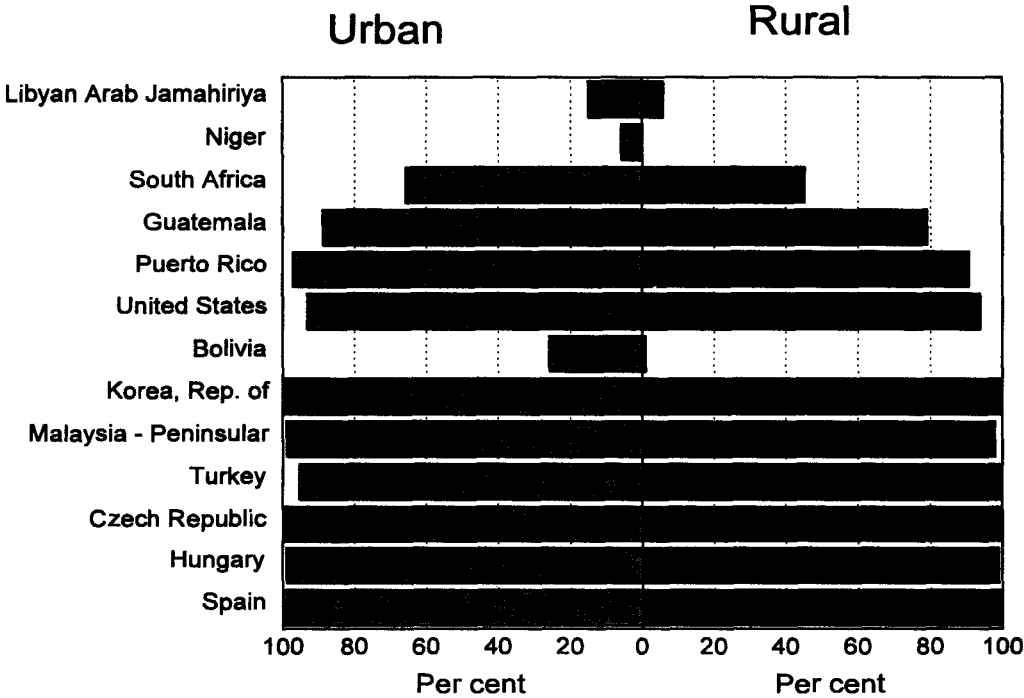

*Marginal housing unit* refers to a unit that does not have many of the features of a conventional dwelling and is generally characterized as unfit for human habitation, but that is used for the purpose of habitation. Therefore, it is neither a permanent structure nor one equipped with any of the essential facilities. These units are characterized by the fact that they are either makeshift shelters constructed of waste materials and generally considered unfit for habitation (squatters' huts, for example) or places that are not intended for human habitation although in use for that purpose (barns, warehouses, natural shelters and so on). Under almost all circumstances, such places of abode represent unacceptable housing.

*Collective living quarters* include structurally separate and independent places of abode intended for habitation by large groups of individuals or several households and occupied at the time of the census. Such quarters usually have certain common facilities, such as cooking and toilet installations, baths, lounge rooms or dormitories, which are shared by the occupants. They may be further classified into hotels, rooming houses and other lodging houses, institutions and camps.

**Coverage**

Data are presented for 79 countries/areas and for 197 cities. For national definitions of urban and rural, see section on General Notes.

**Percentage of households living in conventional dwellings in urban and rural areas: selected countries**

## 2. Households by type of living quarters: country or area, urban/rural, cities, latest available year

(See notes at end of table.)

### NOTES

<sup>1</sup> Calculated by the United Nations.

<sup>2</sup> Includes data for Dakar, the capital.

<sup>3</sup> Data for Dakar include satellite towns of Pike and Gue'diawaye.

<sup>4</sup> Port Victoria is the only city and it is an administrative rather than residential area. Greater Victoria comprises Victoria, all central districts and Victoria suburbs.

<sup>5</sup> Conventional housing unit refers to a house on separate plot, a flat in blocks of flats, a town/ cluster/ semi-detached house and to a housing unit in retirement village. Basic housing unit refers to a traditional dwelling and to a house/ flat/ room in backyard. Temporary housing unit refers to an informal dwelling/ shack in backyard and to an informal dwelling/ shack elsewhere. Collective living quarters refer to caravans/ tents.

<sup>6</sup> Data as reported; the total differs from the sum of categories.

<sup>7</sup> Data on rural households refer to St. Andrews City.

<sup>8</sup> Collective living quarters not included in totals shown.

<sup>9</sup> "Washington" includes: District of Columbia and the Maryland counties of Calvert, Charles, Fredrick, Montgomery and Prince Georges and the Virginia counties of Arlington, Fairfax, Loudoun, Prince William, Stafford plus the city of Alexandria. "Los Angeles" includes: the city of Los Angeles and the balance of Los Angeles County. "New York" includes: the city of New York and the counties of Nassau, Orange, Putnam, Rockland, Suffolk and Westchester. "Houston" includes: the city of Houston and the balance of Harris County, and the counties of Brazoria, Fort Bend, Montgomery and Waller.

<sup>10</sup> Conventional housing unit refers to adequate housing unit i.e. a permanent unit equipped with both water supply within the unit and sewage. Basic housing unit refers to inadequate housing unit i.e. a permanent unit without both water supply within the unit and sewage. Marginal housing unit refers to a particular improvised unit, i.e. a unit in a structure that is not conducive for habitation and also includes improvised housing units: huts, barracks and any other structure not conducive for habitation.

<sup>11</sup> Data on living quarters refer to occupied quarters only. Data on households in temporary units also include 2,305 domestic households living on board vessels. Data on households in collective living quarters also include 126 collective households on board vessels.

<sup>12</sup> Data on temporary housing units refer to both temporary and floating units.

<sup>13</sup> Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

<sup>14</sup> Designation and data provided by Israel. The position of the United Nations on the question of Jerusalem is contained in General Assembly resolution 181 (II) and subsequent resolutions of the General Assembly and the Security Council concerning these questions.

<sup>15</sup> Data provided as percentages only.

<sup>16</sup> Data on marginal units also include data for mobile units.

<sup>17</sup> The population in basic and temporary units is not distinguished. Data on basic housing units also include temporary housing units.

<sup>18</sup> Data on households refer to occupied housing units.

<sup>19</sup> Data on conventional housing units refer to residential buildings and other buildings with living quarters.

<sup>20</sup> Data refer to a 2% sample. Data on households in basic housing units also include temporary and marginal units. Data do not include households in collective living quarters.

<sup>21</sup> The Population and Housing Census of 26 November 1995 distinguished between private and institutional households. Data in this table refer to private one-person and multi-person households only.

<sup>22</sup> Data refer to conventional housing units and 11,775 households are without information.

<sup>23</sup> Data on households refer only to enumerated households.

<sup>24</sup> There is no distinction between households and living quarters. Data on urban refer to Nuku'alofa.

### 3. Occupied housing units, number of occupants, number of persons per housing unit and number of persons per room by number of rooms: country or area, urban/rural, cities, latest available year

#### Technical notes

#### Definitions

For definition of *housing unit* refer to technical notes for table 2.

Occupied *housing units* refer to housing units occupied at the time of the census or survey, that is, units that are not vacant.

*Occupant* refers to each person resident in a housing unit.

*Room* is defined as a space in a housing unit or other living quarters enclosed by walls reaching from the floor to the ceiling or roof covering, or to a height of at least two meters, of an area large enough to hold a bed for an adult, that is, at least four square meters. Types of rooms include bedrooms, dining rooms, living rooms, studies, habitable attics, servants' rooms, kitchens, rooms used for professional or business purposes, and other separate spaces used or intended for dwelling purposes, so long as they meet the criteria concerning walls and floor space. Passageways, verandas, lobbies, bathrooms and toilet rooms should not be counted as rooms, even if they meet the criteria.

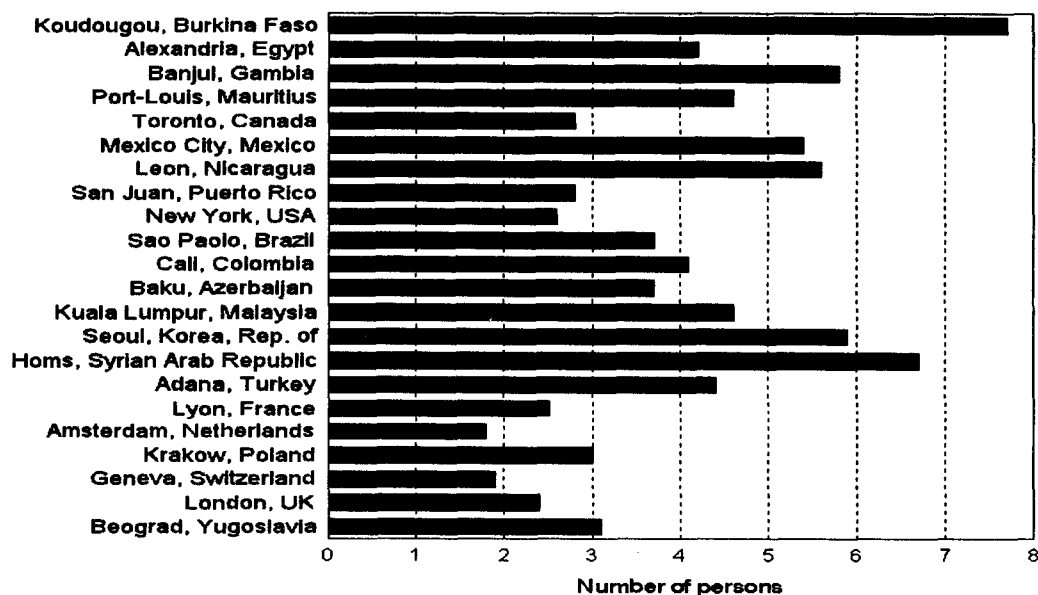

*Number of persons per unit* is obtained by dividing the number of occupants by the number of occupied housing units. The calculations were made by the United Nations.

*Number of persons per room* is derived by dividing the number of occupants by the number of rooms in a given housing unit. The number of rooms is obtained by multiplying the number of units by the number of rooms in the unit. The calculations were made by the United Nations.

#### Coverage

Data are presented for 64 countries or areas and 176 cities. For national definitions of urban and rural, see section on General Notes.

#### Average number of persons per occupied housing unit: selected cities

**NOTES**

<sup>1</sup> Data for the category "5 rooms" refer to housing units with 5+rooms.

<sup>2</sup> Data as reported; the total differs from the sum of categories.

<sup>3</sup> Data for the category "Total" also include housing units with unknown number of rooms, as follows: 3,609 for total, 2,371 for urban, 878 for rural, 643 for Nuuk, 418 for Sisimut, 266 for Ilusat and 313 for Qaqortoq.

<sup>4</sup> Data for the category "4 rooms" refer to units with 4 or 5 rooms. Data for the category "6 rooms" refer to units with 6 or 7 rooms. Data for cities refer to 1990.

<sup>5</sup> Estimated data.

<sup>6</sup> Data for total occupied housing units include 2,417 occupied marine vessels. Data for total number of occupants include 9,612 persons in marine vessels and 578 persons in collective households on board vessels.

<sup>7</sup> Data for the category "6 rooms" refer to housing units with 6+rooms.

<sup>8</sup> Including data for East Jerusalem and Israel residents in certain other territories under occupation by Israeli military forces since June 1967.

<sup>9</sup> Designation and data provided by Israel. The position of the United Nations on the question of Jerusalem is contained in General Assembly resolution 181 (II) and subsequent resolutions of the General Assembly and the Security Council concerning this question.

<sup>10</sup> Data for total occupied housing units and total number of occupants are provisional and are estimated based on advanced sample tabulation of census data. Data for the category "6 rooms" also include with 6 or more rooms.

<sup>11</sup> The total differs from the sum of categories and that difference refers to the category "not stated".

<sup>12</sup> Data for total occupied housing units include 11,775 housing units with no information on urban/rural areas. Data for the total number of occupants include 24,701 occupants with no information on urban-rural areas.

<sup>13</sup> Data for the category "2 rooms" also include housing units with 1 room. Data for the category "5 rooms" include units with 5 or more rooms.

<sup>14</sup> The category "7 rooms" refer to "7+ rooms".

<sup>15</sup> The total differs from the sum of categories and that difference is due to 22,259 persons for whom information is not collected, plus the category "not stated".

<sup>16</sup> Data refer to Nuku'Alofa, the capital.

**4. Households in housing units by water supply system: country or area, urban/rural, cities, latest available year**

**Technical notes**

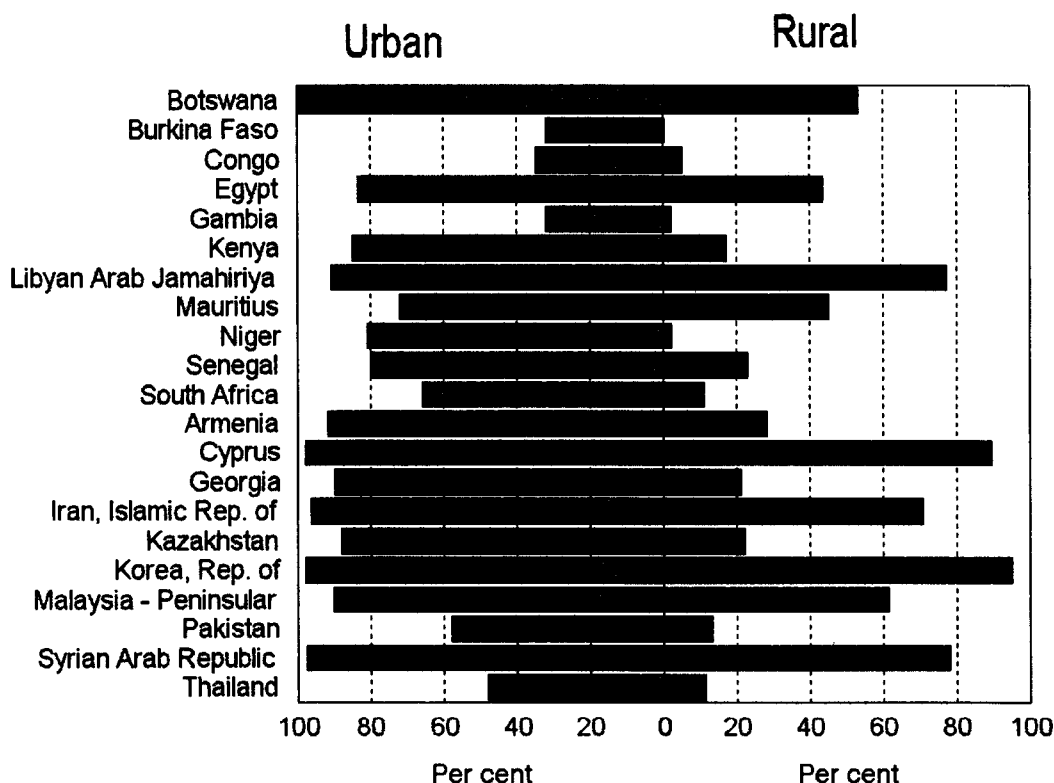

**Definitions**

*Water supply system* refers to the source of a housing units' water supply. *With piped water inside the housing unit* refers to the existence of water pipes within the walls that constitute a housing unit. Water can be piped *from the community source*, i.e. one that is subject to inspection and control by public authorities. Such systems are generally operated by a public body but in some cases they are generated by a cooperative or private enterprise. Water can be also piped into the unit *from a private source*, such as a pressure tank, a pump or some other installation. The category *piped water outside unit, but within 200 meters* refers to units where the piped water is not available to occupants within the unit they reside in, but is accessible within the range of 200 meters, assuming that access to piped water within that distance allows occupants to provide water for household needs without being subjected to extreme effort. *Other* refers to units that do not have access to piped water at all, whose occupants depend on *springs or wells*, or to units where piped water is located beyond 200 meters.

**Coverage**

Data are presented for 63 countries or areas and 144 cities. For national definitions of urban and rural, see section on General Notes.

**Percentage of households with piped water inside housing units: urban/rural, selected countries in Africa and Asia**

#### 4. Households in housing units by water supply system: country or area, urban/rural, cities, latest available year

## NOTES

- <sup>1</sup> The category "other" refers to households without piped water. The category "piped water outside unit" also includes piped water inside the building.
- <sup>2</sup> Data reported in percentages only.
- <sup>3</sup> The category "piped water outside unit but within 200 meters" includes households using public fountains. The category "other" refers to tank wagon, well/river.
- <sup>4</sup> Data for the category "piped water inside housing unit from community source" refers to public tap and "from private source" refers to piped water inside housing unit. Data for "piped water outside unit but within 200 meters" refer to wells and bore holes. Data for the category "other" refer to tap belonging to a neighbor, to a stream and so forth.
- <sup>5</sup> Data for the category "with piped water inside the housing unit" also include 14,254 households with access to treated piped water. Data for category "piped water outside the housing unit but within 200 meters" also include 1,917 households with access to stand pipes with treated or untreated water.
- <sup>6</sup> Data as reported; the total differs from the sum of the categories.
- <sup>7</sup> The category "other" refers to wells and water carried in ox carts.
- <sup>8</sup> The category "other" refers to sanitary and superficial well, river or stream, tank or delivery car.
- <sup>9</sup> There is no distinction of source of water piped inside the unit.
- <sup>10</sup> Data for the category "piped water outside housing unit but within 200 meters" refer to housing units with piped water outside housing unit but not within a known distance.
- <sup>11</sup> Data reported in percentages and are based on integrated survey of 3,600 households.
- <sup>12</sup> The category "other" refers to households without facilities for piped water.
- <sup>13</sup> Data refer to population, not households.
- <sup>14</sup> Data reported in percentages only and are based on a survey of 6,000 households.
- <sup>15</sup> Data refer to private households only. Data are reported in thousands and in some cases have been rounded.
- <sup>16</sup> Data exclude institutional households.
- <sup>17</sup> Data refer to dwellings.
- <sup>18</sup> Data are based on 2 per cent sample. Data refer to households in conventional dwellings only.
- <sup>19</sup> Small discrepancies between cell counts and marginal totals may arise from rounding.
- <sup>20</sup> All data are estimates.
- <sup>21</sup> One household may have two or more sources of water supply available. For example, a household may have piped water as well as have its own water tank.

## 5. Households in housing units by type of toilet: country or area, urban/rural, cities, latest available year

### Technical notes

#### Definitions

A *toilet* is defined as an installation for the disposal of human excreta.

A *toilet inside unit* refers to an installation, either flush or non-flush located within walls that constitute a housing unit. A *toilet outside unit* refers to units where either a flush or a non-flush toilet is available to occupants, but it is located outside the unit's walls.

A *flush toilet* is an installation provided with piped water that permits humans to discharge their wastes and from which the wastes are flushed by water. A *non-flush toilet* is not equipped with piped water.

#### Coverage

Data are presented for 62 countries or areas and 146 cities. For national definitions of urban and rural, see section on General Notes.

Percentage of households with toilet facilities within the housing unit they occupy: selected cities

## 5. Households in housing units by type of toilet: country or area, urban/rural, cities, latest available year

### NOTES

<sup>1</sup> Calculated by the United Nations.

<sup>2</sup> Data reported in percentages only.

<sup>3</sup> Data as reported; the total differs from the sum of categories.

<sup>4</sup> Data removed due to inconsistency.

<sup>5</sup> Data for households with flush toilet inside housing unit refer to those connected to a sewage line. Data for households with non-flush toilet inside housing unit refer to those connected to sewage and pit latrine. Data for other refer to public lavatory and "field".

<sup>6</sup> Data for flush toilet include chemical toilet. Data for non-flush toilet refer to pit latrine and bucket latrine.

<sup>7</sup> Data refer to private households.

<sup>8</sup> The category "toilet inside unit" refers to household with latrines. The category "other" refers to households with no toilet facilities.

<sup>9</sup> The category "other" refers to households with no toilet facilities.

<sup>10</sup> Data for the category "with toilet inside the housing unit" do not distinguish whether the toilets are located inside or outside the housing unit. Data for the category "with toilet outside the housing unit" include pit latrines. Data for the category "other" refers to housing units without any sanitary services.

<sup>11</sup> Data for the category "toilet outside unit" include toilets connected to sewage and septic tanks for collective use and latrines.

<sup>12</sup> Data for the category "not stated" refer to households in housing units without toilet facilities.

<sup>13</sup> No distinction between inside and outside unit.

<sup>14</sup> Data reported in percentages and are based on integrated survey of 3,600 households.

<sup>15</sup> Data on the total number of households are extracted from a different table of the original questionnaire.

<sup>16</sup> The category "other" refers to households without flush toilets.

<sup>17</sup> Data refer to households in conventional dwellings only.

<sup>18</sup> Data for the category "toilet inside unit" refers to households with exclusive use of the toilet. The category "toilet outside unit" refers to households sharing toilet facilities.

<sup>19</sup> The category "toilet outside unit" refers to shared toilets.

<sup>20</sup> Data refer to private households. Data reported in thousands and in some cases have been rounded.

<sup>21</sup> The category "non-flush toilet" includes non-flush toilet outside unit. The category "with toilet outside unit" refers to flush toilets outside the unit used by one or several households.

<sup>22</sup> Data are based on 2 per cent sample. Data refer to households in conventional dwellings only.

<sup>23</sup> Virtually all households have access to a flush toilet inside the housing unit.

<sup>24</sup> Data for total includes 11,775 households with no information on urban/rural.

<sup>25</sup> Data for the category "flush toilet" refer to flush toilets from community source. Data for "non-flush toilets" refer to local flush toilets from private source.

<sup>26</sup> Data refer to occupied housing units and not households.

## 6. Households in housing units by type of solid waste disposal: country or area, urban/rural, cities, latest available year

### Technical notes

#### Definitions

*Solid waste disposal* refers to the collection and disposal of solid waste generated by occupants of the housing unit.

*Solid waste collected by authorized collectors* refers to the arrangement, usually supervised by local authorities, whereby solid waste is regularly collected and disposed of by authorized collectors. *Solid waste collected by unauthorized collectors* refers to the arrangement for the collection of waste by collectors not supervised by local authorities. This is common for the collection of waste in squatter settlements.

*Solid waste disposed of at a local dump* refers to occupants carrying solid waste to a local dump which may or may not be supervised by local authorities.

*Other* is a residual category for types of solid waste disposal not previously identified.

#### Coverage

Data are presented for 17 countries or areas and 35 cities. For national definitions of urban and rural, see section on General Notes.

**Percentage of households from which solid waste is collected by authorized collectors: selected cities**

## 6. Households in housing units by type of solid waste disposal: country or area, urban/rural, cities, latest available year

### NOTES

<sup>1</sup> Data as reported; the total differs from the sum of categories.

<sup>2</sup> Data on solid waste collected by authorized collectors refer to solid waste receptacles. Data on solid waste collected by unauthorized collectors refer to solid waste enclosures and ash pits. The category "other" refers to solid waste dumped on roadside.

<sup>3</sup> Data for the category "other" refer to burning, burying solid waste or dumping in any other form.

<sup>4</sup> Data for the category "other" refer to the following: solid waste disposed or buried in property, solid waste disposed in open areas and solid waste disposed in rivers or sea.

<sup>5</sup> Data for the category "other" refer to burning or burying solid waste.

<sup>6</sup> Data reported in percentages and are based on an integrated sample survey of 3,600 households.

<sup>7</sup> Data reported in percentages.

<sup>8</sup> Data for the category "disposed of at a local dump" also include data on solid waste collected by unauthorized collectors.

<sup>9</sup> Data refer to 2% sample.

## 7. Households in housing units by type of lighting: country or area, urban/rural, cities, latest available year

### Technical notes

#### Definitions

*Type of lighting* refers to the source of lighting predominantly used by occupants of a housing unit. The source may be electricity, gas, oil/kerosene or some other source.

#### Coverage

Data are presented for 49 countries or areas and 106 cities. For national definitions of urban and rural, see section on General Notes.

### Percentage of households in housing units with electrical lighting: selected African countries

**7. Households in housing units by type of lighting: country or area, urban/rural, cities, latest available year**

(See notes at end of table.)

## NOTES

<sup>1</sup> Data as reported; the total differs from the sum of categories.

<sup>2</sup> Data for gas refer to candles.

<sup>3</sup> The category "other" refers to housing units without electricity.

<sup>4</sup> Data for the category "other" include candles and battery lamps.

<sup>5</sup> Data refer to population and not households.

<sup>6</sup> Data reported in percentages only.

<sup>7</sup> Calculated by the United Nations.

<sup>8</sup> Not included are 430 units that use solar lighting. As one household can use one or more sources of lighting the sum of categories does not add up to total.

## 8. Population in cities by sex and age: latest available year

### Technical notes

#### Definitions

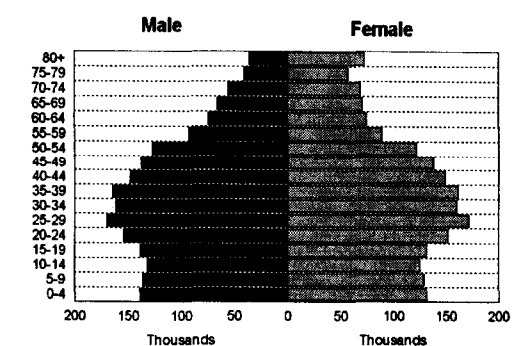

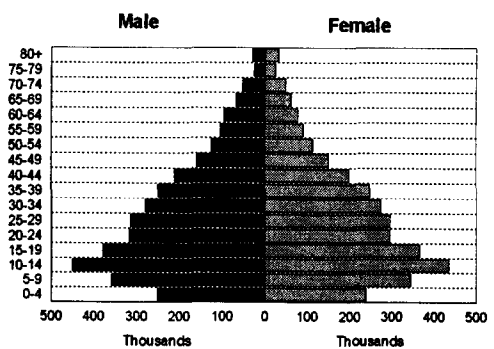

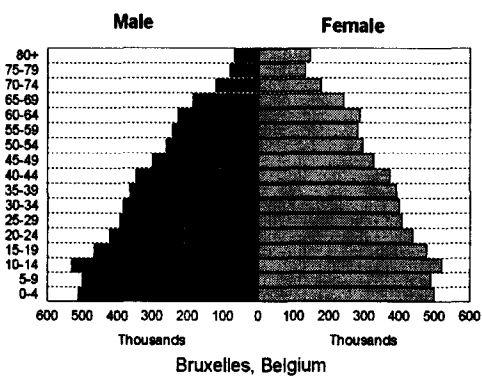

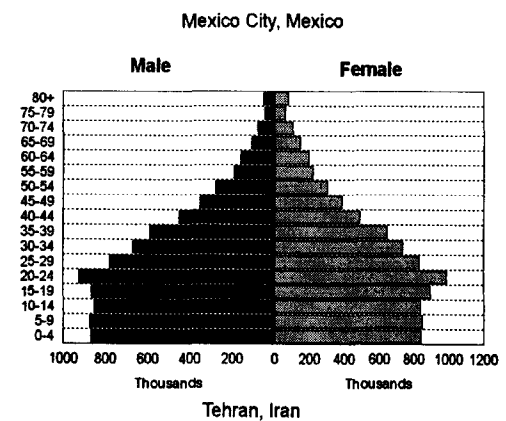

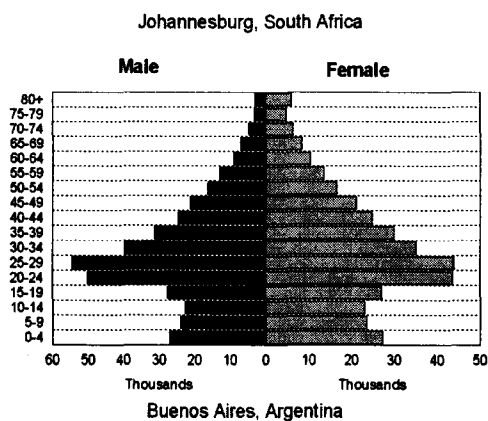

*Total population* is, unless otherwise indicated, the de facto (present-in-area) population enumerated at the most recent census or other statistical exercise for which data are available.

*Age* is the interval of time between the date of birth and the date of the census or other statistical inquiry used to collect data, expressed in completed solar years.

#### Coverage

Data are presented for 267 cities in 80 countries or areas.

### Population age pyramids: selected cities

## 8. Population in cities by sex and age: latest available year

### NOTES

<sup>1</sup> Calculated by the United Nations.

<sup>2</sup> Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

<sup>3</sup> Designation and data provided by Israel. The position of the United Nations on the question of Jerusalem is contained in General Assembly resolution 181 (II) and subsequent resolutions of the General Assembly and the Security Council concerning this question.

<sup>4</sup> Data as reported; the total differs from the sum of categories.

<sup>5</sup> Age group categories shown as reported.

## 9. Percentage of population residing in urban areas, 1990-2030: country or area

### Technical notes

#### Definitions and source

The source of data for this table is United Nations Population Division's publication *World Urbanization Prospects - The 1999 Revision*<sup>2</sup>. The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth*<sup>2</sup> and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment*<sup>3</sup>.

In preparing a global accounting of urban and rural growth, there are numerous problems of data and definition. The criteria for identifying the phenomenon under study are not obvious nor are they necessarily constant from country to country. Moreover, evidence on levels and trends in urbanization does not accumulate continuously; estimates of urban and rural growth must rely heavily on information from widely spaced population censuses.

Since national statistical offices are in the best position to distinguish between urban and rural areas in their own country, estimates are based on urban areas designated by the country under review. National figures are adjusted whenever a change in national urban definition occurs. Such an adjustment avoids the erratic dips and peaks in urban and rural growth that may be produced by definitional change. These irregularities become more problematic when recent growth trends are projected into the future. Therefore, all figures were adjusted to make the definitions as comparable as possible within a particular country. When possible, earlier data were adjusted to the later definition. Occasionally, it was necessary to use a definition that was not nationally adopted in order to maximize comparability over time.

Examination of the levels and trends in urbanization on a regional or global level requires estimates for countries at the same point in time. These time points would correspond to the mid-years of 1980, 1985, 1990 - 2025. Since the dates at which countries conduct censuses or make population estimates vary widely it is necessary to prepare estimates for uniform sequences and dates. The method is relatively simple. When a desired date for estimation in a particular country was bounded by two censuses, the nearest census on either side of the estimation date

was identified and the calculated intercensal difference between the urban and rural growth rates was assumed to have remained constant during the intercensal period. The urban proportion of the desired date was derived through this assumption. When the desired estimation date was not bounded by two censuses or other concrete estimates, the two nearest observations were identified and the measured intercensal urban/rural growth difference between them was applied forward or backward in time, as required. One advantage of working with urban/rural growth difference is that it shows considerable stability over a wide range of conditions. A second advantage is that it can be computed directly from the proportions urban that are recorded in two censuses, rather than from absolute numbers. Hence, it is relatively insensitive to changes in the completeness of census enumeration.

Basically, the method used by the United Nations Population Division to project urban population involves

Percentage of urban population, 1990-2030

<sup>2</sup> United Nations DESA Working Papers, ESA/P/WP.161

<sup>2</sup> United Nations Publication No. E.79.XIII.9, New York, 1980

<sup>3</sup> United Nations Publication ST/ESA/SER.R/45, New York, 1982

extrapolating into the future the most recently observed urban/rural growth difference. This procedure results in a logistic time path of the proportion urban which has a peak of velocity (annual absolute gain in proportion urban) at a proportion 0.5 and has a maximum urban proportion 1.0, eventually to be reached by all countries or areas.

The procedure was modified, since the most important source of difference between urban and rural growth rates is net rural/urban migration. As the urban proportion increases, it therefore becomes more and more difficult to maintain a particular urban/rural growth difference because the pool of potential migrants to urban areas declines as a fraction of the urban population, while the pool of potential migrants to rural areas increases as a fraction of the rural population. Therefore, it is reasonable to expect the urban-rural difference to decline as the urban proportion rises.

The final step in the procedure described above is the application of both the estimated and the projected proportions urban to United Nations estimates and projections of total national population.

The definitions of urban areas as applied in table 9 in some cases differ from those described in the section on General Notes for this *Compendium* (see pages 4-5) and are listed here:

*American Samoa*: Places with 2,500 or more inhabitants and urbanized areas.

*Bahrain*: Communes or villages with 2,500 or more inhabitants.

*Benin*: Localities with 10,000 or more inhabitants.

*Cambodia*: Municipalities of Phnom Penh, Bokor and Kep, and 13 urban centres.

*Cayman Islands*: Entire population.

*Chad*: Ten urban centres.

*East Timor*: Dili.

*Eritrea*: Localities with 2,000 or more inhabitants.

*Fiji*: Places with a population of 1,000 or more.

*Italy*: Communes with 10,000 or more inhabitants.

*Jordan*: Localities with 10,000 or more inhabitants and each subdistrict centre irrespective of size of population.

*Kiribati*: Tarawa.

*Kuwait*: Agglomerations of 10,000 or more inhabitants.

*Lao People's Democratic Republic*: Sum of five largest towns: Vientiane, Luang Prabang, Savannakhet, Kammouan and Pakse.

*Lesotho*: The district headquarters and other settlements of rapid population growth with facilities that tend to encourage people to engage in more activities that are non-agricultural in nature, as nuclei.

*Marshall Islands*: The entire population of Majuro atoll and Ebeye on Kwajalein atoll.

*Micronesia* (Federated State of): Localities with 1,000 or more inhabitants.

*Monaco*: City of Monaco.

*Mozambique*: Conselho of Maputo and Beira.

*Nauru*: Nauru.

*Netherlands Antilles*: Population of urban agglomeration of Willemstad and Philipsburg and Kralendijk.

*Niger*: Urban centres (27 towns).

*Nigeria*: Towns with 20,000 or more inhabitants whose occupations are not mainly agrarian.

*Niue*: Alofi.

*Northern Mariana Islands*: Places with a population of 1,000 or more.

*Oman*: Two main towns, Muscat and Matrah.

*Palau*: Koror.

*Pitcairn*: No urban population.

*Qatar*: Not available.

*St. Pierre and Miquelon*: St. Pierre.

*Sao Tome and Principe*: São Tomé and Príncipe.

*Saudi Arabia*: Cities with 5,000 or more inhabitants.

*Sierra Leone*: Towns with 2,000 or more inhabitants.

*Singapore*: City of Singapore.

*Slovakia*: Large towns, usually with 5,000 or more inhabitants, having a density of more than 100 persons per hectare of built-up area, three or more living-quarters in at least 15 per cent of the houses, piped water and a sewerage system in the major part of the town, at least five physicians and a pharmacy, a nine-year secondary school, a hotel of at least 20 beds, a network of trade and distributive services which serve more than one town, job opportunities for the population of the surrounding area, the terminal for a omnibus system and not more than 10 per cent of the total population active in agriculture; small towns usually with 2,000 or more inhabitants, having a density of more than 75 persons per hectare of built-up area, three or more living-quarters in at least 10 per cent of the houses, piped water and a sewerage system for a least part of the town at least two physicians and a pharmacy, other urban characteristics to a lesser degree and not more than 15 per cent of the total population active in agriculture; and agglomerated communities having the characteristics of small towns in regard to size,

population density, housing, water-supply and sewerage, and the percentage of the population active in agriculture, but lacking such town characteristics as educational facilities, cultural institutions, health services and trade and distributive services, because those facilities and services are supplied by a town in the vicinity.

*Somalia*: Towns with 5,000 or more inhabitants.

*Spain*: Municipalities with 10,000 or more inhabitants.

*Turks and Caicos Islands*: Grand Turk.

*Tuvalu*: Funafuti.

## 9. Percentage of population residing in urban areas, 1990-2030: country or area

## NOTES

<sup>1</sup> The more developed regions comprise all regions of Europe, Northern America, Australia/New Zealand and Japan.

<sup>2</sup> The less developed regions comprise all regions of Africa, Asia (excluding Japan), Latin America and the Caribbean, Melanesia, Micronesia and Polynesia.

<sup>3</sup> The least developed countries, as defined by the United Nations General Assembly in 1998, include 48 countries: 33 in Africa, 9 in Asia, 1 in Latin America and 5 in Oceania. These countries are also included in the less developed regions.

<sup>4</sup> Including Agalega, Rodrigues and St. Brandon.

<sup>5</sup> Including Ascension and Tristan de Cunha.

<sup>6</sup> For statistical purposes, data for China do not include Hong Kong Special Administrative Region (SAR) of China.

<sup>7</sup> Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

<sup>8</sup> Refers to the Vatican City State.

<sup>9</sup> Including Christmas Island, Cocos (Keeling) Islands and Norfolk Island.

## 10. Urban population, number of urban agglomerations and percentage of urban population by size of urban agglomeration: major area and region, 1980-2015 with five-year interval

### Technical notes

#### Definitions and sources

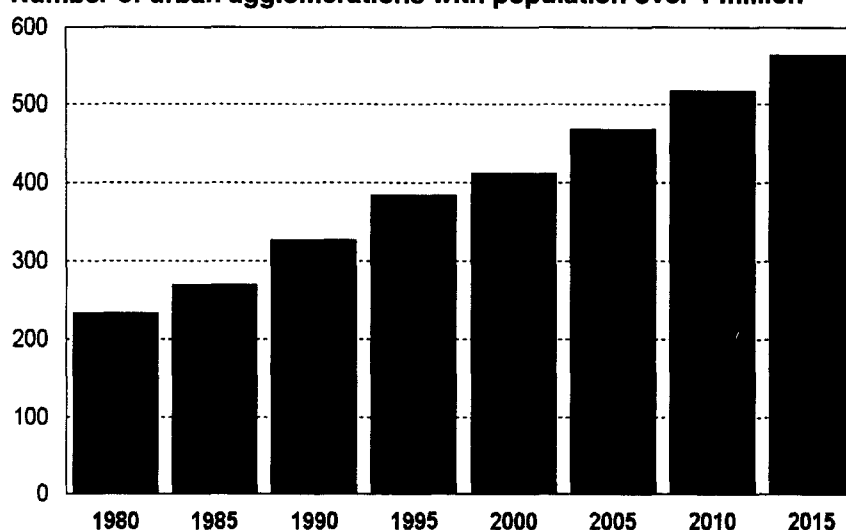

The source of data for this table is United Nations Population Division's publication *World Urbanization Prospects - The 1999 Revision*<sup>1/</sup>. The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth*<sup>2/</sup> and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment*<sup>3/</sup>.

The projections of the proportion of urban population residing in urban agglomerations is a complex exercise. The number of cities in a particular size category changes from one projection period to the next; if cities grow sufficiently, they will leave one size category and enter a larger one. Thus, these data do not refer directly to the growth of population in cities but rather to population growth in size classes. During periods of national population growth and urbanization, the largest size class expands not only from population growth in cities that were previously allocated to that class, but also from cities newly entering the class. Projections for the other categories are even more complex because in addition to cities that have graduated into a particular class, other cities simultaneously leave the size class. The population in the smaller size classes are not projected far into the future, for there is no way that decisions can be made on a global level as to which cities might reach 100,000 population during the projection period. This lack of information not only affects the smallest size class, but also has implications for the next larger classes, because, in the long term, the graduation of cities in the smallest category becomes one of the sources of growth in the categories immediately following the smallest one. Long-term projections therefore would seriously underestimate population growth in these categories.

The designations "more developed" and "less developed" regions used in this table are intended for statistical convenience and do not express a judgement about the stage reached by a particular country or area in the development process.

The 48 "least developed countries", classified as such by the United Nations General Assembly in December 1994, are: Afghanistan, Angola, Bangladesh, Benin, Bhutan, Burkina Faso, Burundi, Cambodia, Cape Verde, Central African Republic, Chad, Comoros, Democratic Republic of Congo, Djibouti, Equatorial Guinea, Eritrea, Ethiopia, Gambia, Guinea, Guinea-Bissau, Haiti, Kiribati, Lao People's Democratic Republic, Lesotho, Liberia, Madagascar, Malawi, Maldives, Mali, Mauritania, Mozambique, Myanmar, Nepal, Niger, Rwanda, Samoa, Sao Tome and Principe, Sierra Leone, Solomon Islands, Somalia, Sudan, Togo, Tuvalu, Uganda, United Republic of Tanzania, Vanuatu, Yemen, and Zambia.

**Number of urban agglomerations with population over 1 million**

**11. Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants: countries or areas, 1980-2015 with five-year interval**

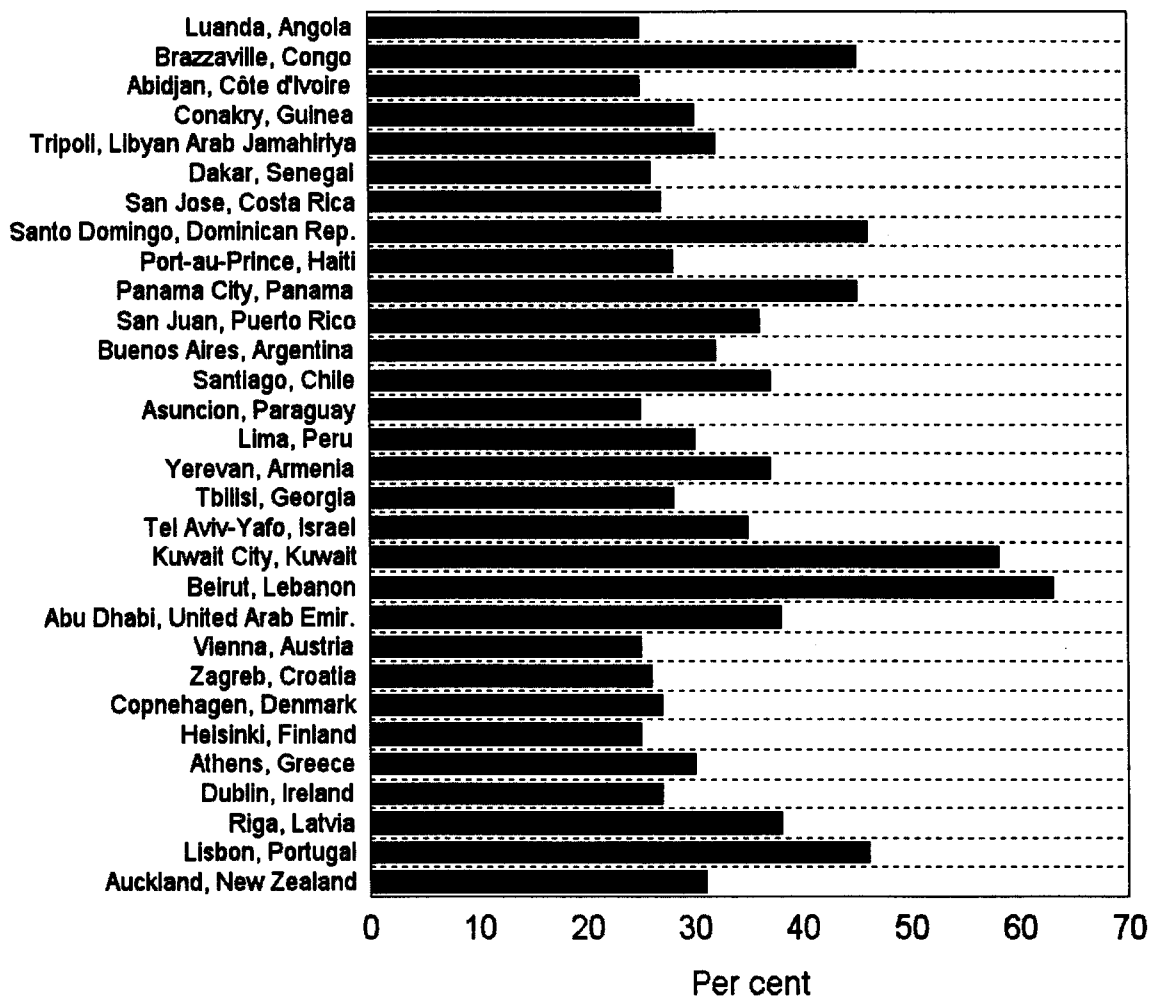

**Technical notes**

**Definitions and sources**

The source of data for this table is United Nations Population Division's publication *World Urbanization Prospects - The 1999 Revision*<sup>1/</sup>. The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth*<sup>2/</sup> and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment*<sup>3/</sup>.

For more details on estimates and projections of population in urban agglomerations and the distribution of urban agglomerations by size see technical notes for table 10.

**Projected city population (2015) as per cent of total population: selected cities**

<sup>1/</sup> United Nations DESA Working Papers, ESA/P/WP.161

<sup>2/</sup> United Nations Publication No. E.79.XIII.9, New York, 1980

<sup>3/</sup> United Nations Publication ST/ESA/SER.R/45, New York, 1982

**11. Percentage of total population residing in urban agglomerations with 750,000 or more inhabitants: countries or areas, 1980-2015 with five-year interval**

**NOTES**

All numbers are presented as percentages of the total population of each country.

<sup>1</sup>Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

## 12. The 30 largest urban agglomerations ranked by population size (in millions): 1980-2015 with five-year interval

### Technical notes

#### Definitions and sources

The source of data for this table is United Nations Population Division's publication *World Urbanization Prospects - The 1999 Revision*<sup>1/</sup>. The method used for projecting city populations is presented in detail in *Patterns of Urban and Rural Population Growth*<sup>2/</sup> and also in *Estimates and Projections of Urban, Rural and City Populations, 1950-2025: The 1980 Assessment*<sup>3/</sup>.

The annual growth rate refers to the percentage of population increase per annum.

The goal of using the urban agglomeration concept, as defined, in the Technical Notes at the beginning of this publication could not be achieved in every instance. Many countries supplied data only on administrative city areas. These data are adequate in countries where local administrative boundaries are widened in conformity with the expansion of the growing agglomerations. In other countries, however, the local administrative limits are more rigid. For a number of countries, data were supplied, for administrative city areas (city proper) and for metropolitan areas (urban agglomerations). In these instances, the metropolitan data were usually preferred because they tend to differ from the agglomeration to a lesser extent than the administrative data, even though the size of the agglomeration may thereby be somewhat exaggerated. For these and other reasons, the estimates for urban agglomerations cannot be regarded as strictly comparable.

The method used for projecting city populations is similar to that used for urban populations (for more details see Technical Notes for Table 9). The city growth rate was successively modified during the projection period to approach linearly an expected value that is based on the size of the city and the urban growth rate for the country or area. However this approach does not take into account the sudden growth or decline a city may experience.

**13. Estimated number of households and annual household growth rate, 1985-2030 with fifteen-year intervals; changes in number of households in five-year increments, 2000-2020: countries or areas**

**Technical notes**

**Definitions and sources**

These data were provided by the United Nations Centre for Human Settlements and were prepared through a special project. The data will be presented in detail in the forthcoming *Global Report on Human Settlements*<sup>2</sup>. These estimates are unique in their coverage, as estimates for countries with insufficient data are also provided; but they are not meant to compete with national projections.

The household projections were based on different concepts and methods and are a function of data availability and reliability. The various types of projection approaches and the countries for which the respective approach has been applied are specified below:

*(1) Total headship rate based projection:*

*Africa* - Algeria, Benin, Botswana, Burkina Faso, Cape Verde, Gambia, Kenya, Lesotho, Libyan Arab Jamahiriya, Madagascar, Malawi, Mali, Mauritius, Niger, Rwanda, South Africa, Sudan, Tunisia, United Rep. of Tanzania, Zambia and Zimbabwe;

*America, North* - United States;

*America, South* - Bolivia, Brazil, Colombia, Dominican Republic, Ecuador, Guatemala, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Paraguay, Peru and Venezuela.

*Asia* - Bangladesh, Brunei Darussalam, Cambodia, Cyprus, Georgia, India, Indonesia, Iraq, Japan, Kazakhstan, Kuwait, China Macau SAR, Malaysia, Maldives, Pakistan, Republic of Korea, Singapore, Sri Lanka, Thailand, Turkey, Viet Nam and Yemen;

*Europe* - Albania, Austria, Belarus, Bulgaria, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Spain and Switzerland.

*Oceania* - Fiji, French Polynesia, New Caledonia and Solomon Islands.

*(2) Headship size rate based projection:*

*Africa* - Burundi, Central African Republic, Republic of Congo, Egypt, Liberia, Morocco, and Réunion;

*America, North* - Bahamas, Barbados, Belize, Canada, Costa Rica, El Salvador, Guadeloupe, Guyana, Martinique, Netherlands Antilles, Panama, Puerto Rico, and Trinidad and Tobago;

*America, South* - Argentina, Chile, and Uruguay.;

*Asia* - Armenia, Azerbaijan, Bahrain, China, China Hong Kong SAR, Iran (Islamic Republic of), Israel, Jordan, Kyrgyzstan, Nepal, Philippines, Syrian Arab Republic, Tajikistan, Turkmenistan and Uzbekistan.

*Europe* - Belgium, Norway, Republic of Moldova, Romania, Russian Federation, Sweden, Ukraine, United Kingdom and Yugoslavia;

*Oceania* - Australia, Guam, New Zealand, Samoa and Vanuatu.

*(3) Estimation on country level not possible:*

*Africa* - Angola, Sierra Leone, and Western Sahara;

*Asia* - Afghanistan, Dem. People's Republic of Korea, East Timor, Gaza Strip and Lebanon;

*Europe* - Bosnia and Herzegovina.

*(4) Estimation on the basis of one data point:*

*Africa* - Cameroon, Comoros, Cote d'Ivoire, Dem. Republic of the Congo, Eritrea, Ethiopia, Gabon, Ghana, Guinea, Guinea-Bissau, Mauritania, Mozambique, Namibia, Nigeria, Senegal, Togo and Uganda;

*Asia* - Mongolia, Myanmar, Oman, Qatar and United Arab Emirates;

*Europe* - Croatia, Czech Republic, Iceland, Slovakia, Slovenia, and the Former Yugoslav Republic of Macedonia;

*Oceania* - Suriname and Papua New Guinea.

---

<sup>2</sup> Oxford University Press, New York and London, 2001.

*(5) Estimation with no data point:*

*Africa* - Chad, Djibouti, Equatorial Guinea, Somalia and Swaziland;  
*Asia* - Bhutan, Lao People's Dem. Republic and Saudi Arabia.

The concept of *household* is based on the arrangements made by persons, individually or in groups, for providing themselves with food or other essentials for living. A household may be either : (a) a one-person household, that is, a person who makes provision for his or her own food or other essentials for living without combining with any other person to form a part of a multi-person household; or (b) a multi-person household, that is a group of two or more persons living together who make common provision for food or other essentials for living. The persons in the group may pool their incomes and may, to a greater or lesser extent, have a common budget; they may be related or unrelated persons or constitute a combination of persons both related and unrelated. This concept of household is known as the "housekeeping" concept. It does not assume that the number of households and housing units is equal. Although the concept of housing unit implies that it is a space occupied by one household, it may also be occupied by more than one household or by a part of a household (for example two nuclear households that share one housing unit for economic reasons or one household in polygamous society routinely occupying two or more housing units).

**13. Estimated number of households and annual household growth rate, 1985-2030 with fifteen-year intervals; changes in number of households in five-year increments, 2000-2020: countries or areas**

(See notes at end of table.)

**NOTES**

<sup>1</sup> The first data point available for South Africa is 1992, a backward extrapolation further than to 1990 is not possible, therefore no data is available for 1985. The growth rate has been calculated for the period 1990 to 2000, for the regional aggregate. An estimation has been used for the period 1985 to 2000. For the aggregates, an estimation for the period of 1985 to 1990 has been used, as a retro projection was not possible.

<sup>2</sup> Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967.

---

### كيفية الحصول على منشورات الأمم المتحدة

يمكن الحصول على منشورات الأمم المتحدة من المكتبات ودور التوزيع في جميع أنحاء العالم . استعلم عنها من المكتبة التي تتعامل معها أو اكتب إلى : الأمم المتحدة ، قسم البيع في نيويورك أو في جنيف .

#### 如何购取联合国出版物

联合国出版物在全世界各地的书店和经售处均有发售。请向书店询问或写信到纽约或日内瓦的联合国销售组。

#### HOW TO OBTAIN UNITED NATIONS PUBLICATIONS

United Nations publications may be obtained from bookstores and distributors throughout the world. Consult your bookstore or write to: United Nations, Sales Section, New York or Geneva.

#### COMMENT SE PROCURER LES PUBLICATIONS DES NATIONS UNIES

Les publications des Nations Unies sont en vente dans les librairies et les agences dépositaires du monde entier. Informez-vous auprès de votre libraire ou adressez-vous à : Nations Unies, Section des ventes, New York ou Genève.

#### КАК ПОЛУЧИТЬ ИЗДАНИЯ ОРГАНИЗАЦИИ ОБЪЕДИНЕННЫХ НАЦИЙ

Издания Организации Объединенных Наций можно купить в книжных магазинах и агентствах во всех районах мира. Наводите справки об изданиях в вашем книжном магазине или пишите по адресу: Организация Объединенных Наций, Секция по продаже изданий, Нью-Йорк или Женева.

#### COMO CONSEGUIR PUBLICACIONES DE LAS NACIONES UNIDAS

Las publicaciones de las Naciones Unidas están en venta en librerías y casas distribuidoras en todas partes del mundo. Consulte a su librero o diríjase a: Naciones Unidas, Sección de Ventas, Nueva York o Ginebra.
