

4.b Items for information: Household surveys

Page/Paragraph	Contents	Comments/Suggestions
Page 3/ Point 8	A mapping exercise of SDGs indicators that can be measured with data from the household surveys	Disaggregating SDGs indicators by disability and non-disability requires large sample size. Indonesia National Socioeconomic Survey with total sample of 75 000 households is not enough to make an estimation of SDGs indicators with disaggregation of disability and non-disability person. Regarding this, a special survey which, is separated from household survey is needed.
Page 3/ Point 11	Periodicity of households survey and survey design	When a household survey carry on quarterly or monthly basis, the problem facing by Indonesia is related to difficulty in making an estimation of educational statistics for one year period of time. It is because starting time to the enrollment in education is in the mid-year (June or July).
