

**Comments/Suggestions for Statistical Commission 50th Session  
New York, March 2019**

**3(d) Items for information and discussion: national quality assurance frameworks**

File/Page/Par.	Contents	Comments/Suggestions
2019-6-NQAF-EE/Page 4/Par. 9-12	<b>IV. Results of the survey on the implementation of a national quality assurance framework.</b>	Indonesia really appreciate to the UN NQAF manual developed by Specific to the result section, it would have been better if the results are presented using graph for each region, so that readers might earn better insight towards the implementation of NQAF in each region. Since the more important concern about implementing NQAF should be addressed to the region with low level of NQAF implementation. So that, we can raise more awareness towards the related region(s).
2019-6-NQAF-EE/Page 5/Par.15(a)	Comment on the ... survey on the implementation of a national quality assurance framework in countries and the survey's findings and conclusion;	Regarding to the results of the survey about the implementation of NQAF in various countries, there are still countries that have not implemented NQAF. It is better if they are accompanied (obtaining technical assistance) by countries that are more advanced in implementing the NQAF and have a similar statistical system (centralized / decentralized / others).
2019-6-NQAF-EE/Page 5/Par.15(a)	Comment on the report and the work done by the Expert Group over the last two years...	Regarding the UN recommendations for implementing the NQAF framework and recommendations for establishing NQAF units/task forces and supporting regulations (so that the NSO can coordinating the implementation of the NQAF in NSS), Statistics Indonesia (as NSO) will discuss and consider the implementation plan, including opportunities and challenges.

<p>2019-6-NQAF-EE/Page 5/Par.15(d)</p>	<p>Review and adopt the United Nations National Quality Assurance Frameworks Manual for Official Statistics (UN NQAF Manual).</p>	<p>The content of UN NQAF manual developed by expert groups is complete enough as a guidance for developing the NQAF in the NSS (National Statistics System), because the manual already explained the framework, the quality measurement tools establishment, the institutions/units formation, the regulations, and the commitments.</p> <p>The biggest challenge in Indonesia is about how to make the NSO (National Statistics Organization) as the coordinator for all data producers in the NSS and able to encourage the implementation of the NQAF across all official statistics producers.</p>
