

What: Showcasing the use of administrative data for children

When: Tuesday, March 3rd, 8:15 - 9:30am

Where: UNICEF House (Danny Kaye), 3 UN Plaza, New York, NY 10017

Administrative data is an important source of data on children – both as a data source for international reporting and accountability, and for national and sub-national planning and service delivery. Over the last year, UNICEF has invested in developing a maturity model to improve benchmarking against best practice and assist countries and partners to prioritize investments to improve admin data across sectors. UNICEF also started exploring how to support more resilient and responsive administrative data systems to make better use of administrative data in fragile and humanitarian settings.

There are many such projects that highlight examples of how UNICEF is working with government partners to strengthen systems and make better use of the data collected through routine government services to improve outcomes for children. This session aims to showcase a number of these pieces of work and provide the opportunity for participants to discuss and network.

The showcase will be set up along the lines of a poster session at an academic conference, with short presentations on selected posters, and open discussion encouraged with all paper authors.

Refreshments will be available throughout the session. Light breakfast will be served. Please bring a valid ID.

Side event to the 51st Statistical Commission Meeting, March 3-6, 2020, UN Headquarters, New York
