Statement to the report titled “The development of a geographical name information system to accelerate geographical name standardization in Indonesia “

Japan expresses its appreciation for the significant effort to develop Android SINAR and Web-based SINAR. Japan also recognizes that SINAR has enabled seamless and integrated process in the geographical names standardization in Indonesia.

It would be useful if we could have information about how to adjust many geographical names for a feature, collected by a module to enable everyone to propose name changing, in terms of the standardization of geographical names.

Geospatial Information Authority (GSI) of Japan
